"Weber's Quality Plants" Will Duplicate This Picture

Wehers Guide 1928

H. J. WEBER & SONS NURSERY CO., AFFTON, MISSOURI

OUR GREENHOUSE DEPARTMENT
We grow a very complete list of Annual Bedding
Plants. See page 32.

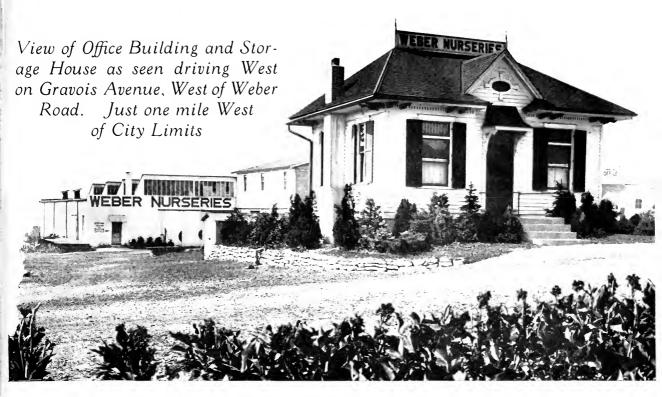

ROSES

Your garden is not complete without a bed of Everblooming Roses. We have a complete stock of the best selected varieties in two-year plants. Plant a bed of "Weber's Quality Plants" and be convinced.

See pages 23 and 24 for list of varieties with prices

Silver Moon — See page 25.

S BUILDERS of natural beauty the Nurserymen are the proper authority. It is through their life-long experience that they are capable to give you the benefit of their efforts, in the selection of plants most suitable for the particular needs of each individual.

We have been in business for over sixty years and have always endeavored to please our long list of regular customers. We want to extend a hearty word of appreciation to all who have helped to make our business a success, also extend a hearty welcome to all who may be interested in beautifying their home grounds.

This annual Guide is presented to you with our compliments, and we earnestly hope the valuable information given herein will prove of inestimable value to each and every one who receives same.

Prices in this Guide are made on nothing but selected stock, up to grades and specifications in the

Our shipping and delivering facilities are the best, for the prompt and efficient handling of any order that may be entrusted to us.

Do not overlook our Greenhouse and Perennial Department, in which you will find a full assortment of stock suitable to this section.

Planting time usually begins about March 15th for spring delivery, depending entirely on weather conditions, lasting until May 1st for all Nursery Stock. Greenhouse stock can be planted about May 1st, after danger of frost is over.

For Fall delivery we usually begin digging Evergreens, Poppies, Phlox, Iris and Delphiniums about September 1st to 10th. General Nursery stock is not dug until after heavy frost to set foliage.

MISSOURI STATE PLANT BOARD

Office of the Chief Inspector, Columbia.

CERTIFICATE OF NURSERY INSPECTION

No. 1C 31

Issued Aug. 3, 1927.

This is to certify that in accordance with the provisions of the Missouri Plant Act of 1925, the nursery and premises thereof belonging to H. J. Weber & Sons Nursery Co. of Aftion, Mo., have been inspected by a duly authorized inspector and were found to be apparently free of injurious insect pests and plant diseases.

This certificate is not transferable and may be revoked for cause. This certificate expires Sept. 1, 1928.

L. HASEMAN, Chief Inspector.

We extend a cordial invitation to visit our Nurseries. We, however, wish to announce that our offices will be closed all day Sunday excepting during the months of September, October and November, also March, April and May, when we will have open Sundays from 8 to 11:30 to accommodate those who cannot come during the week.

Soliciting your correspondence, inquiries and favors, we are

Yours truly

H. J. WEBER & SONS NURSERY CO., INC.

Incorporated 1903.

Terms, Conditions and General Remarks

READ CAREFULLY BEFORE MAKING UP ORDER

Payment Terms. Our terms are invariably cash on delivery. We, however, do not send orders C. O. D., unless conditions warrant. The invoice immediately follows delivery and payment of same is expected within a few days. Unknown parties will please send cash with order or give satisfactory reference. C. O. D. orders must be accompanied by one half cash. one-half cash

Prices in this list include free packing on all trees, plants, etc. The are, however, made subject to stock being unsold upon receipt of order.

Four plants of a kind will be furnished at the ten rate, forty plants at the one hundred rate, four hundred or more at the thousand rate. Less than four plants of any variety will be charged at the single rate.

Shipping. We pack all orders leaving St. Louis in the best possible manner in bales or boxes to insure safe and prompt delivery. If no route is given we use our best judgment and ship by most direct route, either by freight or express as to nature of shipment. All goods travel at purchaser's risk after they are received in good condition by transportation company.

Parcel Post shipments as packed by us will travel long distances without the least damage to contents. Postage will be charged to consignee.

If wanted by insured Parcel Post we will gladly comply with your wishes.

Our Agents are equipped with credentials showing their authority o act as such, and anyone soliciting for us without this authority is false. We would appreciate being advised of such action.

would appreciate being advised of such action.

Non-Warranty Clause. If nursery stock proves untrue to the name under which it is sold by us, a replacement of the stock, as originally ordered, without charge, or a refund of the purchase price shall be a complete satisfaction of our liability. Except for such liability, we give no undertaking or warranty, express or implied, as to description, quality, growth, productiveness, or any other matter on any nursery stock we sell. We assume no liability for delays in delivery, or for non-delivery of nursery stock caused by frost, fire, flood, drought, hall, strikes, embargoes, war or other causes beyond our control. Our responsibility ceases upon the delivery of stock in good condition. Complaints, if any, must be made within five days after delivery.

Errors. Any errors that may occur in filling orders must be reported.

Errors. Any errors that may occur in filling orders must be reported within five days after receipt of goods. We will immediately correct same. Complaints entered after the above stated time will not be entertained.

Losses. All stock will be sent out in good condition. We do not guarantee stock to live, nor do we make up any losses whatever, due to climatic conditions or after-culture on the part of the purchaser. Immediately upon receipt of stock, open the package and ascertain the condition of same; check up the varieties and compare with your order and report to us at once any complaints that are to be made.

Inspection. Our nurseries are annually inspected by the State Entomologist and have been found free of San Jose Scale and other dangerous insects and diseases. A copy of certificate of inspection will be attached to every package that leaves our establishment.

Substitution. It is customary, should the supply of a variety become exhausted (as will occasionally occur in all establishments), to substitute in its place a similar sort if there is such. Should it be desired for us not to do this, please state on your order "No substitution."

Selections. Persons not acquainted with the different varieties can leave the selection to us, in which case we will select as if planting for ourselves.

Liberal Replacement Offer made because of our confidence in the vitality of our plants. We agree to re-supply F. O. B. our nurseries at one-half of the original purchase price, any nursery stock purchased from sa t catalog rates that may fail to grow by July 1st following season planted from causes other than abuse or neglect. This offer applies only to accounts that are promptly paid in full when due. Any labor involved in planting such replace orders is to be borne by the customer.

Replacement. There are good reasons why plants may sometimes fail to grow well after transplanting. Poor soil, dried condition due to transportation delay, careless or improper culture, excessive drought, neglect, insect or disease attacks are some of the causes often to blame. After delivering plants in good order to your home or to the transportation company it is obvious that we have no control whatever over these future conditions. It is not reasonable, therefore, to ask us, nor do we in any way agree, to guarantee the results or the outcome of plantings. Should any plant prove untrue to variety ordered we will replace it without charge or refund the purchase price.

NOMENCLATURE

The names of Trees, Shrubs, Perennials, etc., published in this Catalog are in accordance with the recommendations adopted by the American Joint Committee on Horticultural Nomenclature, representing the American Association of Nurserymen, Ornamental Growers' Association, American Society of Landscape Architects, American Pharmaceutical Association, American Association of Park Superintendents.

Webers' Paeonies are the most beautiful of all Hardy Perennial Plants and

should be in every garden, large or small.

See page 30 for complete listing of the very best varieties.

An Ideal Planting for a Small Home

Landscaping

Our business is the growing and supplying of trees and plants of all kinds described in our catalogue for Landscape work.

Artistically planted home grounds are not the result of chance. They come from careful planning, and proper selection of varieties. Thousands of dollars are spent each year for nursery stock which is practically wasted because people do not know what to plant and where to plant it. In order to have something of enduring value, artistic and satisfying, to show for the money you spend on your grounds, you should have some set plan to follow. The beauty of a planting often depends less upon the plants used than it does upon their proper disposition, grouping and arrangement.

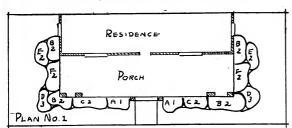

Your property will not have reached its full development until you have beautified it thoughtfully with trees and shrubs. Are you aware that you can increase its money value 25% to 100% with a very small investment? The same sun and rain that wears and deteriorates the value of your house is the natural friend of the landscaped grounds, and it increases wonderfully in beauty year after year. If you will consult us, we will endeavor to assist you by advising the proper plants to use and amount you would require.

Real landscape possibilities exist on even the smallest places. Let us help discover them for you. A few well placed trees and shrubs will have a magic effect. In fact, individual beauty and real distinctiveness are more often achieved in the decoration of modest grounds than in the more pretentious plantings of large places. Some of the best examples of harmonious and artistic lawn planting are to be found on small places.

For a given expenditure of time and money nothing will effect so great and pleasing a transformation as an artistic base planting. Practically every house needs the softening, harmonizing effect of well placed masses of shrubbery. The finest architecture will not save a house from an unpleasant aspect of bareness if this planting has been neglected, while on the other hand the simplest cottage

PRACTICAL LANDSCAPE DESIGNS

Suitable shrub types in selected varieties, assigned to particular locations against the various foundation facings of typical modern houses. Plans shown here, give you an approximate quantity and variety also arraingement of an ordinary planting. Best quality stock in normal shipping sizes is considered in the succeeding plans; which you can order by number.

It is not a Home Until Planted with Trees, Shrubs, Vines, and Flowers

Deciduous Ornamental Trees

A few good trees and an even, luxuriant lawn are the two real essentials for beauty and comfort on the home grounds. Since the trees require several or more seasons to become well established, it is important for the home-owner to get them planted on the property as soon as possible. The opportunity given by the year's rather short planting season should be taken advantage of.

Planting. After setting the tree in a hole much larger than the actual spread of the roots, carefully lay the roots in their natural directions and fill in with good garden soil. When the hole is three-quarters filled, firm the soil with the feet. Then add water liberally and when this has become absorbed, complete the filling of the hole with soil. Top-pruning is absolutely essential to good growth; the branches should be shortened back about one-third after planting. On poor soil, fertilizing is essential but manure should never be put in the hole directly around the roots. Spread the fertilizer on the soil above, after planting is completed. This may also be well mixed with the soil before filling in.

Fertilizing. We are now prepared to offer a fertilizer, especially adapted for use among shrubbery and trees. When planting new trees it may be worked into the soil before filling in around tree. For fertilizing gardens and among plants, it can be put on top of ground and spaded or hoed in so as to mix with soil. Ask us about it.

Pruning Trees at Planting Time. This consists in cutting back the top and side branches in such a way as to form a symmetrical shaped top. All broken roots must be cut from the underside to hasten the emission of new fibers.

Trees with branching heads should have the small branches cut clean out, and the larger ones, intended for the framework of the tree, cut back till within two or three buds of their base. In cases where there is an abundant root, and small top or few branches, the pruning need be very light, but where the roots are small and the top heavy, severe pruning will be recessary. These remarks are applicable to all Deciduous Trees and Shrubs. Evergreens seldom require pruning, but Arborvitae and other Evergreens planted in hedge rows may be advantageously shorn immediately after planting.

mediately after planting.

Pruning, as practiced by some people, has the effect to render trees and shrubs unnatural and inelegant. We refer to the custom of shearing trees, particularly Evergreens, into cones, pyramids and other unnatural shapes. Every tree, shrub and plant has a habit of growth peculiar to itself, and this very peculiarity is one of its beauties. If we prune all trees into regulat shapes we destroy their identity. The pruning knife, therefore, should be used to assist nature, and handled with judgment and care; to top off straggling branches, to thin the head of a tree which sometimes becomes too dense, and to remove dead wood. Sometimes it becomes necessary to prune severely to keep a tree from attaining too great size.

CLASSIFICATION OF ORNAMENTAL TREES

For the convenience of purchasers we have classified the various ornamental trees as follows:

Class I-Trees Suitable for Street and Avenue Planting:

Class I—Trees Suitable for Street and Avenue
Acer Saccharinum (Silver Leaved Maple).
Acer Platanoides (Norway Maple).
Acer Saccharum (Sugar Maple).
Fraxinus Alba (White Ash).
Liriodendron (Tulip Tree).
Platanus Occidentalis (American Sycamore).
Platanus Orientalis (European Syvamore).
Populus Monolitera (Carolina Poplar).
Populus Migra (Grecian Poplar).
Populus Nigra (Grecian Poplar).
Quercus Palustris (Pin Oak).
Quercus Rubra (Red Oak).
Salisburia (Maiden Hair).
Tilia Americana (American Linden).
Tilia Platyphyllos (Large Leaved European Linden).
Ulmus Americana (American Elm).

Class II-Trees with Cut or Lanceolated Foliage:

Acer Saccharinum var. Weirii (Weir's Cut-leaved Maple). Betula Alba var. Lacinata Pendula (Cut-leaved Weeping Birch). Sorbus Quercifolia (Oak-leaved Mountain Ash).

Class III - Trees with Colored Foliage:

Acer Platanoides var. Schwedlerii (Schwedler's Maple). Purple foliage in spring.

Prunus Pissardi (Plum). Purple foliage. Populus Alba Bolleana (Popular). Silver foliage. Salix Regalis (Silver Willow). Silver foliage.

Class IV-Trees Producing Conspicuous Flowers:

Aesculus (Horse Chestnuc).
Aralia (Angelica Tree).
Catalpa Speciosa.
Cercis (Red Bud).
Chionanthus (White Fringe).
Cornus (White and Red Flowering Dogwood).
Craetaegus (Thorn). White and Scarlet Flowering. Cornus (White and Red Flowering Dogwood Craetaegus (Thorn). White and Scarlet Flo Cytisus (Golden Chain).
Halesia (Silver Bell).
Liriodendron (Tulip Tree).
Magnolia. in variety.
Persica (Peach). Double Flowering.
Prunus Triloba (Plum). Double Flowering.
Pyrus (Crab), in variety.

In order to make it easier for planter to select trees for particular purposes, we have adopted

letters to denote the various classes, as follows:

T—Denotes trees that attain a height of 50 feet and over at maturity.

M—Denotes trees that attain a height of 25 to 40 feet at maturity.

S—Denotes trees that attain a height of 8 to 15 feet at maturity.

-Denotes trees that attain a height of 2 to 8 feet at maturity.

ACER-MAPLE

A. platanoides (Norway). T. A native of Europe. Its large, compact habit, broad, deep green shining foliage, render it one of the most desirable species for streets, parks and lawns.

Weeping Deciduous Trees

ACER—MAPLE

A. saccharinum var. Wierli (Wier's Cut-leaved Maple). See Deciduous Trees.

BETULA—Birch

B. alba laciniata pendula (Cut-leaved Weeping Birch). T. Trunk straight, slender, white as snow; branches hanging in long pendulous threads from a great height; leaves finely cut; a universal favorite.

Each Per 10 45.00

MORUS—Mulberry

M. alba pendula (Weeping Mulberry). S. A graceful and beautiful hardy tree, forming a perfect umbrella shaped head, with long, slender, willowy branches, drooping to the ground and gracefully swaying in the wind. Foliage small-lobed and of a delightful fresh, glossy green. Admirably adapted to cemetery planting.

Each Per 10

Weeping Mulberry

SALIX—Willow

S. babylonica (Babylonian Weeping Willow) M. A well-known and most graceful tree of large size. Its fresh, bright green tint and long, wavy branches make it very attractive.

Each 6 to 8 feet..... \$1.75 \$15.00 8 to 10 feet. 2.00 17.50

S. blanda (Wisconsin Weeping Willow). M. Of drooping habit and beautiful form. The most hardy of all Weeping Willows.

Each Per 10

Each Per 10 \$1.75 \$15.00 8 to 10 feet.

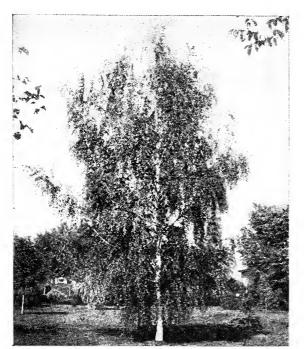

S. elegantissima (Thurlow's Weeping Willow). M. Larger, hardier and more spreading than the Babylonica. A fine variety where a large size tree

ULMUS—Elm

U. var. camperdown pendula (Camperdown Weeping Elm). S. One of the finest weeping trees for the lawn. With broad foliage and branches drooping gracefully to the ground.

SUGGESTIONS ON PLANTING

In planting, due regard should be paid to the space available, and trees and shrubs should not be planted at random. Nothing is more handsome than a fine, well-cut lawn, with trees and shrubs planted along the drives leading to the house and other buildings. The background for a large lawn should be of the different varieties of larger growing trees, with groups of specimen trees in the foreground. Most shrubs are at their best planted in beds, either all of one variety or with several varieties so arranged that the higher growing ones will form the center with those of lower growing habits massed around them. These plants should be thoroughly cultivated and annually pruned. It is not well to plant so few that years must pass before a good effect is produced, but a surplus should be planted at first and this gradually taken out. Vines should be planted near the house and allowed to clamber on it or may be trained with fine effect over arbors or stakes placed in the lawn.

Cut-Leaved Weeping Birch

Special Collection Offers for Spring, 1928

Red, White and Blue Grape Collection

6-Concord -Niagara 2-Brighton

Parties who have never bought from us, we would ask that they order one or more of these collections, to acquaint themselves with the class of stock we send out.

Classification of Ornamental Shrubs

Our collection of Hardy Shrubs is one of the finest and most complete in the West. To parties desiring to lay out new grounds, or to fill out missing sorts, we would kindly ask correspondence. To make it easier for planter to select shrubs for particular purposes we have adopted letters to denote the average height to which the various shrubs grow at maturity.

T—Denotes shrubs that grow 12 to 15 feet high. L—Denotes shrubs that grow 8 to 12 feet high. M—Denotes shrubs that grow 6 to 8 feet high.

S—Denotes shrubs that grow 3 to 6 feet high.

Shrubs classified as to height, color of flower and time of blooming.

SHRUBS SUITABLE FOR HEDGES

Baby Rambler Roses. For low hedges in the Rose garden, all of the Baby Ramblers are excellent, giving a wide range of color.
Berberis Thunbergii.—One of the finest and hardiest. Plant 12 inches apart.

nenes apart.

Berberis Thunbergii (Dwarf Rox variety).—Excellent for low dwarf hedges. Plant 8 inches apart.

Hibiscus Syriacus in varieties.—For large screens.

Ligustrum amorense (North).—The hardy Amoor River Privet for sections north of Quincy, Illinois, where the Ovalifolium is not hardy enough.

Ligustrum Lodense—A new dwarf hedge to take the place of boxwoods.

Plant 12 inches apart.

Ligustrum ovalifolium (California Privet).—The great, almost evergreen hedge so largely planted in St. Louis. See page 16.

Philadelphus in variety. Fine for screening, and where a tall informal hedge is desired.

hedge is desired.

Rhodotypos.—Makes a beautiful informal hedge 6 to 8 feet high.

Spirea Anthony Waterer.—Makes a beautiful low hedge, and if
flower heads are kept cut as soon as petals fall will bloom all summer.

Plant this variety 12 inches apart in row.

Spirea Van Houttei.—Makes a beautiful hedge or screen. Should
be more largely used on large grounds. For hedge purposes plant 18 inches
apart in row.

apart in row.

SEE PAGE 9 FOR Special collection Offers **Deciduous Ornamental Shrubs**

Because of their easy culture, rapid growth, adaptability to most any situation, and their great diversity in size, foliage and bloom, the shrubs are of first importance in creating landscape beauty. More pleasing effects can be produced in a few seasons' time by the judicious planting of shrubs than by the use of any other plant. Their cost, too, is quite moderate, and the investment will increase in value each season.

Situation. Suitable locations to plant shrubs about the home yards are many. The house foundation walls and the angles and corners should be softened by shrubs of medium height. Such plants as the Spirea (in variety), Snowberry, Hydrangea, Indian Currant, Barberry and others of like nature are suited to this use. Taller and heavier-growing varieties, such as Lilacs, Philadelphus and Bush Honeysuckle are better planted toward the sides and rear of the grounds. Here their growth can be used to give a frame to the property, block out undesirable views, and serve as a screen to the alley, clothes-yard, or service buildings. Such group plantings should be made in the nature of borders, and the shrubs selected and arranged to give a continuance of bloom, pleasing foliage contrasts, and fall and winter coloring of the bark and berries. Other uses and desirable locations for planting will suggest themselves on considering the characteristics of the ground—terrace and rough slopes can be covered. walks and drives bordered and bare will suggest themselves on considering the characteristics of the ground—terrace and rough slopes can be covered. walks and drives bordered and bare will suggest themselves on considering the characteristics of the ground—terrace and rough slopes can be covered, walks and drives bordered and bare corners of the lot filled in.

Planting. Space the larger-growing shrubs, such as Lilacs, about 4 to 5 feet apart, medium-growing shrubs, such as Bridal Wreath, 3 to 3½ feet apart, and dwarf growers, as the Japanese Barberry, 2 to 2½ feet apart. Dig the holes of ample size, place the plant, and after filling in the hole two-thirds with good top soil, add water to the level of the ground and allow this to settle. Complete the filling in of soil later. Always shorten back the top growth of the shrubs at least one-third after the planting. Failure to do this may cause the loss of the plant. Do not place any fertilizer directly around the roots but use it on the surface as a mulch.

Fertilizing. We are now prepared to offer a fertilizer, especially adapted for use among shrubbery and trees. When planting new trees it may be worked into the soil before filling in around tree. For fertilizing gardens and among plants, it can be put on top of ground and spaded or hoed in so as to mix with soil. Ask us about it.

Pruning Shrubs. Many persons train and shear them into regular shapes, imagining that regular outline adds to their effect and beauty. While symmetry and regularity of outline are to be admired in a shrub, this quality should never be gained at the expense of health and natural grace. Each shrub has its peculiarities of habit and foliage, and we should aim to preserve them as far as possible. Judicious pruning to secure health and vigor is necessary, but trimming all kinds of shrubs into any one form shows a lack of appreciation for natural beauty, to say the least. Weigelas, Spireas, Deutzias, Forsythia and Mock Orange flower on the wood of the previous season's growth, hence these shrubs should not be pruned in winter or spring, but in June, after they have finished flowering, when the old wood should be shortened or cut out, thus promoting the growth of the young wood which is to flower the following season.

Altheas and Honeysuckles may be trimmed during the winter or early in the spring, but the branches should only be reduced enough to keep them in good shape. The old growth should be occasionally thinde out and the suckers and root sprouts removed when they appear. The best time, however, for pruning all shrubs is when they have done flowering. Lilac should be pruned by cutting the little spikes and used as cut flowers. After blooming period is over all old flowers should be removed. The Hydrangea Paniculata Grandiflora should be severely cut back and thinned early in spring.

and thinned early in spring.

ABELIA

In the south this shrub is evergreen, but with us it slieds its leaves during the late winter. One of the most beautiful and satisfactory plants. Foliage is dark green and glossy, with a pronounced tinge of red in the young branches; a very graceful plant, covered with white flowers, tinged with pink. Should be given protection during winter in this climate

30 to 36 inches	.70	6.50	55.00	

B. atropurpurea (New Red-Leaved Japanese Barberry). It is similar in all respects to the green-leaved Japanese Barberry which is so popular for mixing in the shrubbery border, as single specimens, or for planting in clumps on the lawn, as well as for foundation plantings and for hedges, but the foliage of this new variety is of a rich, lustrous, bronzy-red. However, unlike these and other colored shrubs in which the coloring fades or disappears entirely as the season advances, this new Barberry changes to vivid orange, scarlet, and red shades, more brilliant and more effective than in the ordinary Japanese Barberry. In this coloring it is unequaled by any other Barberry. In this coloring it is unequaled by any other shrub and is followed by the same brilliant scarlet berries common to the type, which remain on the plant the entire winter. All that is required to develop its brilliant coloring at all seasons is that it be planted in full exposure to the sun.

BUDDLEIA—Butterfly Bush

B. davidii magnifica. S. A most beautiful shrub and one that should be in every garden. A splendid shrub for park planting. It makes large shrubs even from small plants the first season. Single plants will often have 50 or more flower spikes the first year. The second year will often have 50 or more flower spikes the first year. The second year after planting it generally begins to bloom in June and continues throughout the summer until frost nips it. The flowers are produced on long, graceful stems that terminate in tapering panicles of beautiful lilacolored flowers of miniature size and borne by the hundred on flower heads frequently 10 inches long. This admirable shrub should be classed as zemi-herbaceous, as it sometimes freezes back to the ground in severe winters, but comes up again from the roots. A mulch of classed as semi-neroaceous, as it sometimes recees back to the ground in severe winters, but comes up again from the roots. A mulch of manure, leaves or other suitable material should be given before heavy freezing weather sets in. You should try some of these; you will be delighted with them.

HYDRANGEA

The massiveness of bloom on these valuable shrubs and their long blooming season, assure them a place in every group where solid white effects are required.

Golden Bell

H. arborescens (Smooth Hydrangea). S. This beautiful shrub is being sent out under various names, as "Snowball Hydrangea," "Hills of Snow." etc. This new American Hydrangea is believed to be the most beautiful, hardy flowering shrub introduced for many years.

The plant attains a height of five or six feet, with about the same breadth, is far more graceful than the old form of Hydrangea Arborescens. Flowers are borne in large trusses, beautifully formed and of dazzling whiteness, rendering it a plant of peerless beauty. Seems to do best in rather damp or shady location.

The flowers, when cut, remain in good condition a long time, thus making the plant especially seful for cut flowers.

SYRINGA—Lilac

Lilacs are decidedly most effective when planted in groups. They produce an abundance of showy flowers in spring and early summer. In certain parts of the New England states, every farm has several large clumps of lilacs planted about the house, and during the spring months the air is fairly saturated with their delicate fragrance. This custom could easily be adopted anywhere, for the shrubs are easily transplanted in the fall and spring, and make a strong growth in any good soil. The only attention they require is the removal of dead flowers after blooming. Pruning should be done immediately after the blooms are removed; if done during the winter and spring it will destroy many of the flowers.

Ornamental Vines and Climbers

Climbing Vines are just as necessary in the beautifying of grounds as shrubs, trees, or grass; they have their important part in the planting of every

Around new buildings, they give shade quickly and are very cooling and cheerful. For verandas or trellises, there is nothing that adds more beauty Afound new buildings, they give shade quickly and are very cooming and cheeren. For vertainess, there is nothing that adds more healty than a proper selection of vines, and, by covering summer-houses or trunks of dead trees, a strikingly wild, naturalistic effect is secured.

Vines are often used for covering stone walls, rocky banks, and steep slopes, where they are not only beautiful, but the fragrance from the flowers is pleasing. Innumerable uses for vines will suggest themselves when improving a property. The ideas given here are from practical experiences.

A. quinata. A beautiful, hardy Japanese vine, with unique foliage and chocolate purple flowers of delightful fragrance, in large

2-year-old plants (Layers).. \$1.00 \$9.00

Venusta. A new addition to our list. White flowering and is a better bloomer than the common sinensis alba. Each

\$1.20 \$10.00 2-vear plants....

Our Wistaria are grown from layers or grafts from blooming plants, hence are guaranteed to bloom.

The Evergreen should not be overlooked in arranging your plantings. They make your home cozy in winter, when the shrubs are bare.

Evergreens—Coniferae

Since the Evergreens retain their foliage continuously throughout the year, they have a value and use in landscape planting not possessed by any other class of plants. During the winter months, their cheerful green color, in contrast with the snow, is a continual source of pleasure. Their attractiveness is none the less certain during the summer months, as their character and appearance is such as to give a decided additional beauty to the grounds. A consideration of the many varieties we list, will acquaint the reader with their great diversity of form, color, habit of growth, and general appearance.

PLANTING. Our Evergreens are given special care, handled carefully, and transplanted frequently so that they are in proper condition to be successfully moved from the nursery. All prices listed are for trees balled with earth and wrapped in burlap (the Weber way), so that they reach customers in good condition. For immediate effects, we can supply large-sized

specimens in almost every variety. The best planting-time is in April, depending entirely on weather conditions. If the spring is late the planting season may be extended. Evergreens can also be easily transplanted in the fall, during September and October, providing we have sufficient rains to moisten the soil. In planting, a large-sized hole is required, that will receive the ball of earth without cramping. These should be dug about 6 to 8 inches wider than the ball, also 4 to 6 inches deeper, depending on the size of the tree; place the tree in the hole, roll the burlap covering enough to clear the trunk of the tree, and, after filling two-thirds with good garden soil, flood with water and allow this to soak into the ground. Soil can then be filled in to nearly the groundlevel. Newly moved Evergreens require thorough watering several times a week until established.

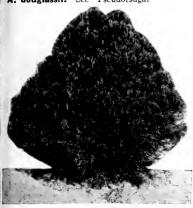

HOW TO PLANT EVERGREENS

- 1. DIG A HOLE SEVERAL INCHES LARGER THAN THE BALL OF THE PLANT TO BE PLANTED.
- 2. SET TREE IN HOLE A TRI-FLE LOWER THAN IT STOOD IN THE NURSERY.
- 3. FILL GOOD TOP SOIL UP AROUND BALL, PACK FIRM-LY WITH FEET OR SETTLE BY FILLING HOLE WITH WATER,
- 4. LOOSEN BURLAP AT TOP OF BALL AND ROLL BACK OR CUT OFF.
- 5. FILL HOLE WITH SOIL. PACK FIRMLY AND LEAVE TOP OF GROUND COVERED WITH LOOSE EARTH OR BETTER MULCH WITH STRAW.

Austrian Pine

Evergreen Shrubs

Evergreen shrubs are coming into use more and more, as they are so desirable in landscape work. The foliage helps out and enlivens the bareness of deciduous trees and shrubs in winter. They are all fond of shady places and are suitable for north sides of houses, garages and north hillsides.

The soil for this class of shrubs should be carefully prepared with leaf mold, peaty soil, and should be mulched annually with well decomposed manure or partly decomposed forest leaves.

Spring is the proper time to transplant.

AZALEA AMOENA

A bushy, dwarf grower with small green leaves that deepen to a lustrous coppery hue in winter. In April or May the whole plant is covered with a mass of brilliant, claret-colored flowers that retain their beauty for several weeks. Very ornamental and desirable for edging of drives and walks or for bordering beds of Kalmia, Ilex, etc. Each 12 to 15 inches. \$3.00

A. hinodegiri. A bright scarlet form of the well known Azalea Amoena, but far surpasses it in brilliancy and general beauty; a profuse bloomer; foliage evergreen.

12 inch plants, set with flower buds, each.\$3.00

ILEX—Holly

The Hollies are coming into demand as people get to know what splendid ornamental plants they are. The foliage is always beautiful, the flowers interesting and the fruits ornamental. A group of Hollies is always a source of pleasure.

| 1. opaca (American Holly). This is our native Holly, but is a rare plant in our American nurseries. Only a limited stock on hand.

2 to 3 feet B-B. \$7.50
3 to 4 feet B-B. 10.00

1. verticillata. See Deciduous Shrubs.

MAHONIA—Holly Grape

Mahonia aquifolia (Holly-Leaved Mahonia).
A native species of medium size, with purplish, shiny, prickly leaves, and showy, bright yellow flowers in May, succeeded by bluish berries. Its glossy foliage and neat habit render it a very popular plant for decorative purposes.

24 to	30 inches	B-B	4.00

Roses THE QUEEN OF

Soil. Roses delight in a clay loam, enriched with well-rotted barnyard manure. Dig up the soil thoroughly to a depth of 12 to 15 inches, pulverize well; do not raise beds above the level of the surrounding soil. Soak the bed occasionally during the summer with weak manure water.

Location. Roses delight in an open, airy situation, unshaded by trees and buildings. Always plant in solid beds and each class for itself.

when to Plant. We advocate planting Hybrid Perpetuals, Ramblers, Prairie, Wichuriana, Moss, Rugosa, Australian and Sweet Briars in the fall, wherever possible. If planted in spring, should be planted as early as possible before growth starts. Hybrid Teas, Tea, China, Polyantha and Climbing Hybrid Teas are best planted in the spring, during April and May. Pot-grown plants are best in these classes and can be planted the same as Geraniums or other bedding plants at any time after freezing weather is past.

Protection. As soon as severe freezing weather sets in, raise the earth around the plant three or four inches, cover entire bed with dry, light manure, then cover with leaves.

manure, then cover with leaves.

Soil Conditions. No Roses should be planted at any time that the soil is in a wet, soggy condition. The soil should be in a loose, pliable condition. The plants should be firmly packed, first with the hands and then with the foot; be careful not to bruise the roots, or to break the ball on the potted class excepting to remove some of the top soil of the ball. Be sure to give your plants a good saking-of water immediately after planting. The following day after planting loosen up the soil around the plants to a depth of about one-half inch, so as to form a loose soil mulch. Water at intervals according to weather conditions, until the plants have become well established, after which little or no watering need be given except in extreme drouth conditions when a good, thorough soaking about once a week will be found very beneficial. Watering should only be done late in the evening at any time, and the ground raked over the following morning. If you will follow these instructions you should have no trouble in raising a fine lot of Roses.

Pruning. This should be done during March. For Hybrid Per-

raising a fine lot of Roses.

Pruning. This should be done during March. For Hybrid Perpetuals remove about one-third to one-half of the previous year's growth. Strong-growing varieties require less pruning back than weak-growing ones. In the everblooming class two-thirds of the previous year's growth should be removed. Cut out all old or decayed wood annually, also all feeble branches and such as are crowding each other. Some of the Hybrid Perpetual varieties can be made to bloom again in the fall, if pruned soon after spring blossoming time is over.

American Beauty Roses

Ulrich Brunner

Climbing Roses should not be cut back severely. After the blooming period the poor growth and very old wood can be removed.

Insects and Diseases. Do not let these discourage you. There are now a number of remedies, easily applied, that will rid your plants of any insects very quickly if applied promptly.

Sulfocide controls Mildew. Use Arsenate of

Lead for Chewing Insects.

WEBER'S SELECTED LIST Hybrid Perpetual Roses—Rosa Hybrida Cifera

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.

This class of roses is admirably suited for garden culture, for the formation of rose beds, hedges and permanent plantations, where hardy varieties of roses are desired. They are of easy culture and luxuriant in a deep, rich soil. They are benefited by mulching in the fall of the year. Prune according to the habit of growth, cutting back closs all weak shoots and shortening the long cane to a convenient length. Plant two feet apart in beds

Prices unless otherwise noted:

Dormant Plants, 2-yr. No. 1. Each, 75c; per 10, \$6.50; per 100, \$50.00.

EVERBLOOMING ROSES

Consisting of Hybrid Teas, Teas, Bourbon, Hybrid Polyantha and China or Bengal Roses

Letters H. T. denote Hybrid Tea Roses. Letter T. denotes Tea Roses. Letter B. denotes Bourbon Roses. Letter C. denotes China or Bengal Roses. Letters H. Pol. denote Hybrid Polyantha.

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.

This class of roses is suitable for general cultivation, as they are usually our very best roses, blooming continuously throughout the season. Require more care in winter protection than do the Hybrid Perpetuals in this climate and further north, but will repay the extra care in a goodly supply of fine flowers when roses of the hardy variety are scarce. Protect for winter by hilling the soil up around crowns about 6 to 8 inches as soon as heavy freezing winter weather sets in. Cover this with well rotted manure or leaves.

NOTICE—In case we are sold out on any one grade, we reserve the right to substitute variety of same color or send either the next larger or smaller grade, changing prices accordingly. If it is not desirable that we do this, please so state on your order.

Smaller grade, changing pines accounting.

At the block changing pines accounting the control of the Everblooming varieties in dormant plants, which can be planted in April. These plants, if cut back to five inches from the ground at planting time, will produce an abundance of bloom the entire summer.

RUGOSA AND HYBRID RUGOSA

Price—2-year, No. 1, each \$0.75; per 10 \$7.00; per 100 \$60.00, unless otherwise noted.

F. Meyer. The finest of the Hybrid Rugosas, producing very fragrant, silvery pink flowers of large size. It blooms in June and occasionally thereafter. The bush is extremely vigorous, attaining a height of from 6 C. F. Meyer. to 10 feet and is perfectly hardy.

Hansa. Red. New Century. Flesh-pink with light red

Rugosa Alba. Single white.

Sir Thos. Lipton. White, double flowers constantly in blocm.

Rosa Rugosa Rubra. Single red. Popular as a hedge rose.

Each Per 10 Per 100
2-year, No. 1...... \$0.60 \$5.00 \$40.00 Rose Hugonis (Golden Rose of China). This is a valuable addition to our list of Roses. Every branch of the previous year's growth is, in late April and early May, closely set on both sides to the very tips with exquisitely beautiful, single clear yellow flowers, almost concealing the foliage.

The long arching sprays make Hugonis not only a beautiful shrub to be planted, if one so prefers, with other shrubs but when cut, are charming as table decorations.

It attains a height of six feet by the same in width. The young growth coming from the roots show a beautiful reddish maroon. Foliage turning to a pleasing purple in Fall.

MISCELLANEOUS ROSES

Harrison's Yellow. Deep yellow, hardy 2-year, each 75c; per 10 \$6.50.

Rosa Blanda (Wild Meadow Rose). Bright rose. 2-year, each 50c; per 10 \$4.00.

Rosa Lucida (Wild Rose). The familiar redfruited "Wild Rose." 2-year, each 50c; per

10 \$4.00.

Rosa Multiflora. Strong growing, long arching canes, covered with white clusters in June. 2-year, each 50c; per 10 \$4.00.

Rosa Palustris (Carolina Rose) (Swamp Rose). Flowers pink. Numerous. June to September. Leaves five to nine lobed. Grows four to seven feet high. Largely used in shrub classifiers in the east. 2-year, cach 70c; per plantings in the east. 2-year, each 70c; per 10 \$6.50

Rosa Rubiginosa (Common Sweet Briar). The well known old variety, famous for the fragrance of its foliage. 2-year, each 70c; per 19 86,50.

per 10 \$6.50.

Rosa Satigera. Single, deep rose-colored flower. 2-year, each 500; per 10 \$4.00. flower. 2-year, each 500; per 10 \$ Sweet Briar. See Rosa Rubiginosa.

Classification of Hardy Perennials

Plant Flowers to beautify your home grounds, to hide unsightly foundations, in borders or hedge, or in artistically arranged beds, to make your grounds radiate with their beauty and fragrance.

Although popularly known as old-fashioned plants, Perennials have never been so popular as they are at the present time, and we feel safe in saying that a permanent taste has been developed which is certain to continue and make Perennials as popular in the United States as they have been in the noticultural centers of Europe for many years. Cultivation is of the simplest, beginning with any good soil for a foundation, which may be enriched with any good fertilizer, such as well decomposed cow manure or bone meal, deeply dug, well pulverized, in season as early as possible, so as to enable them to become well rooted and established before hot, dry weather sets in, keeping the ground well stirred, and where it is convenient to water beds during hot, dry weather, a mulch of any loose material, which will keep the soil from baking, will be found very beneficial.

Short grass, the rakings of the lawn after cutting, will be as good for this purpose as anything.

A covering of manure should be applied in the fall. This may be forked into the soil early in the spring; beyond this, little care need be given, the occasional staking of a plant, the cutting off of decaying flowers, which will prolong the flowering season of many species, and the dividing and replanting occasionally of such varieties that have become too large, being all that is needed.

Our Perennials are mostly all potted in the fall and carried over winter in cold frames. This gives them an excellent root system and they start off in the spring the same as though they had been planted in the fall. They are grown annually from seed or divisions, hence you get only young, thrifty stock that will produce results in the first year. We advise planting during the month of April. But many varieties can be planted all through the month of May.

The heights given indicate the height Plant attains at maturity.

The heights given indicate the height Plant attains at maturity.

FLOWERS AND SHRUBS

Hollyhock rust, rose mildew, and other diseases of flowers and shrubs are readily controlled with Sulfocide. Use at the rate of 2 lbs. fresh Kayso or Casein Spreader and I gallon Sulfocide to 200 gallons of water, If you prefer not to have the spray show on the foliage, use 3 lbs. of son instead of the Kayso, but do not use the soap in combination with a poison. See page 45.

> HE flowers our grandmothers loved and planted in their gardens were mostly perennials! The "Old-Fashioned Gardens" so much in vogue at the present time are gardens of perennials! And just as in the days of our grandmothers, the reappearance of the charming bright faces, spring after spring and summer after summer, is like the treasured visits of well-loved friends. Certainly there is great interest and fascination in the changes throughout the whole growing season, -- something new every day-as one group of plants after another send up their bewitching buds, followed by great drifts of blue, pink, scarlet, yellow and orange. Furthermore most perennials gain in beauty as they become more firmly established with the years. No garden is complete without at least a portion planted to these old fashioned flowers. We offer here a most complete list of these beautiful hardy plants.

Weber's Hardy Perennial Plants

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.

ACHILLEA—Milfoil or Yarrow

A. millifolium roseum (Rose-flowered Yarrow). Rosy-lilac, from June to August. Each 25c; per doz. \$2.50.

ptarmica "Boule de Neige" (Ball of Snow. Pure white, double flowers. Each

25c; per doz. \$2.50.

. ptarmica fl. pl. (The Pearl). Pure white flowers all summer long. Each 25c; per doz. \$2.50.

AEGOPODIUM—Bishop's Weed

Podagraria Variegata. A rapid-growing plant, with neat green and yellow variegated foliage, thriving in any soil; makes a fine border for a bed of shrubs or for covering waste ground. Ifoot. Each 25c; per doz. \$2.50.

AGROSTEMMA—Rose Campion

A. coronaria (Mullein Pink,). Bri crimson. Each 25c; per doz. \$2.50. Bright rose-

ALYSSUM—Madwort

saxatile compactum (Basket of Gold). Showy bright yellow flowers; excellent for rock work. Each 25c; per doz. \$2.50.

italica "Dropmore variety." gentian blue. Each 35c; per doz. \$3.50. Rich

ANTHEMIS - Marguerite

A. kelwayi. Daisy-like golden yellow blossoms all summer. Nice for cutting. Each 25c; per doz. \$2.50.

AQUILEGIA—Columbine

A. California hybrids. Equisite flowers, yellow and orange shades.

A. canadensis. Scarlet and yellow native species, one of the brightest.

A. chrysantha (Golden spurred). Golden yel-

A. chrysantha alba. Very pretty white va-

.. coerulea. Bright blue and white flowers, long spurred.

A. helenae. Strong grower, producing numerous flowers of a lovely shade of blue and

A. hybrids (Long Spurred). Large flowers with long spurs in blue, white, yellow, orange, with long spurs in orde, scarlet and bright rose.

Scarlet and bright rose.

Beautiful large pure

A. nivea grandiflora. white. Each 25c; per doz. \$2.50.

ARTEMESIA

A. abrotanum. Dark green, finely cut foliage, with pleasant odor.
A. stelleriana (Old Woman). Deeply cut silvery foliage. Good for carpet bedding.
A. lactiflora (Hawthorn scented). Elegantly cut dark-green foliage and terminated by panicles of Hawthorn-scented creamy white Spirea-like light and graceful flowers.
Each 25c; per doz. \$2.50.

ASCLEPIAS—Butterfly Weed

A. tuberose. Very showy brilliant orange colored flowers in July and September. Each, 30c; per doz. \$3.00.

ASTERS—Michaelmas Daisies

A. amethystinus. Amethyst Blue, 3 ft.
A. feltham Blue. Pretty shade of aniline

A. feltham Biue. Pretty shade of aniline blue, 2½ ft.

A. laevis. Light heliotrope, 4 ft.

A. Mrs. F. W. Raynor. Reddish violet, 4 ft.

A. novae angliae. Bright violet purple, 4 ft.

A. Robert Parker.—Pale heliotrope, 4 ft.

A. tartaricus. Bluish violet, late, 6 ft.

A. white queen. Fine white, 4 ft.

Fach 25: per des 25:50

Each 25c; per doz \$2.50.

BOCCONIA—Plume Poppy

cordata. A noble plant, beautiful in foliage and with creamy white flowers during July and August. Each 25c; per doz. \$2.50.

BOLTONIA—False Chamomile

Native hardy plant with large single aster-like flowers. Blooms during the summer and autumn months with hundreds of flowers.

B. asteroides. White
B. latisquama. Lavender.
Feed are needed for Sara

Each, 25c; per doz. \$2.50.

Delphinium

(Illustrating Gold Medal Hybrids)

CAMPANULA-Bell Flower

C. medium blue (Canterbury Bells). Plants grown from the very best strain of seeds.
C. medium rose (Canterbury Bells). Plants grown from the very best strain of seeds.
C. medium white. Plants grown from the very best strain of seeds.
C. calycanthema blue (Cup and Saucer Canterbury Bells). A very fine clear shade of the control o A very fine clear shade of blue and flowers nice for cut flowers.

Similar to the blue variety, only flowers are white.

C. calycanthema white. Similar to the blue variety, only flowers are white.

C. pyramidalis (Chimney Bell Flower). An attractive plant for herbaceous borders, forming a perfect pyramid, crowned with large, silver-blue flowers. Each 25c; per doz \$2.50.

CARNATION—Hardy

A fine border plant for the hardy garden. Grenadine. Pink. Grenadine. Red. Strong plants to bloom this year.

Each 25c; per doz. \$2.50.

CARYOPTERIS—Blue Spirea

CHRYSANTHEMUM—Shasta Daisy

Blooms all summer. C. hybridum (Alaska). Hight, 12 to 15 inches. Color white. A great improvement over Shasta Daisy, being much larger, 4½ to 5 inches in diameter. Very free bloomer and much hardier than its parent. Each 25c; per darger of the parent. doz. \$2.40; per 100 \$15.00.

CHRYSANTHEMUM—Hardv

This class of perennials are the glory of the Autumn garden. They are the one remaining cheerful note after devastating frosts have destroyed all other flowers. Excellent

for cutting.

For Winter protection, do not cover with heavy mulch of manure, but rather use some light covering of straw or leaves.

LARGE FLOWERING HARDY VARIETIES

Autumn Glow. Rosy red. Autumn Glow. Rosy red.
Excelsior. Bright orange yellow.
Marisbeau. Large dark rose.
Old Homestead—Buff pink.
Petite Louise. Light pink. Bronze center.
President. Rich purple crimson.
Rosea. Large pink.
Quinala. Golden yellow.
Victoria. Large pink.
Fach accepted of Salon, per 100 \$14.00.

Each 20c; per doz. \$2.00; per 100 \$14.00.

BUTTON-SHAPED POMPON

Bessie Brown. Reddish bronze. Little Dot. Yellowish brown. Each 20c; per doz. \$2.00; per 100 \$14.00.

CONVALLARIA—Lily of the Valley

The popular little spring flower, for shady places, 4-in. potted plants, each, 35c; per doz. \$3.50. Dutch pips, per 25, \$1.75; per 100, \$6.00.

COREOPSIS—Tickseed

C. lanceolata grandiflora. The most popular summer cut flower, golden yellow. Should be in every garden. Fach 20c; per doz. \$2.00; per 100 \$10.00.

DELPHINIUM—Larkspur

D. belladonna. Free bloomer, June to frost. Flowers turquoise blue. A fine summer cut-flower plant.
D. bellamosum. The dark blue form of the popular light blue Belladonna with which it is identical in habit of growth, freedom of bloom but with intensely rich, deep blue flowers.

deep blue flowers.

D. gold medal hybrids. A fine strain of mixed hybrids from England. Very fine.

Each 30c; per doz. \$3.00; per 100 \$20.00.

We invite every flower lover to visit our Greenhouses and see the large line of plants we carry.

Pompon, Single and Large Double Chrysanthemum

DIANTHUS BARBATUS—Sweet William

D. Scarlet Beauty. A fine scarlet variety.
D. Maroon (Single). Almost black.
D. Newport Pink. An excellent pink

variety

D. holborn glory. A beautiful variety. Special Mixed. A mixture of all colors, just the thing for mass planting along walks, or for mixed borders. Each 25c; per doz. \$2.50; per 100 \$15.00.

DIANTHUS PLUMARIUS—Hardy Garden Pinks

Soft delicate rose-pink. D. delicata. D. Elsie. Bright rose with maroon center.
D. Homer. Rosy-red with dark center.
D. Juliette. White-laced crimson.

Juliette. White-laced crimson.

White Reserve. An everblooming white.
Each 25c; per doz. \$2.50; per 100 \$15.00.

DICTAMNUS—Gas Plant

D. fraxinella. Rose-pink flowers.
D. fraxinella alba. Pure white. Each 5oc; per doz. \$5.00.

DIELYTRA OR DICENTRA **Bleeding Heart**

spectabillis (Bleeding Heart or Seal

Flower) and lanceolated, growing 16

Folia Flowers reddish-purple, drooping.
Foliage silvery and lanceolated, growing 10
to 18 inches high. Each 55c; per doz. \$5.50.

DIGITALIS—Foxglove

D. gloxiniaeflora. A fine strain of finely spotted varieties in colors, white, rose and purple.

purpie.

. maculata superba. An extra choice strain of beautifully spotted sorts.

Each 25c; per doz. \$2.50; per 100 \$15.00.

EUPATORIUM

E. ageratoides. A useful border plant of strong free growth with white flowers in August and September. Each 25c; per doz. \$2.50; per 100 \$15.00.

FERNS-Hardy

Aspidium christatum (Crested Fern). 10 to

15 inches.

Aspidium goldiana. 2 to 3 feet tall.

Asplenium filix foeminae victoriae. 15 to 30 inches.

Onoclea struthiopteris (Ostrich Fern). 24

Osmunda claytonia (Flowering Fern). 24 Osmunda cinnamomea (Cinnamon Fern).

24 to 30 inches.

Osmunda regalis (Flowering Fern). 2 to 3

feet tall. Strong pot-grown plants: Each 50c; per doz. \$5.00.

Hibiscus

FUNKIA—Day Lily

F. coerulea (Plantain Lily). Blue flowers, broad green leaves. Each 35c; per doz. \$3.50.

F. subcordata grandiflora (White Day Lily). Pure white, lily-shaped flowers in August. Each 40c; per doz. \$4.00.

F. undulata media picta. Purple flowers, green and white variegated foliage. Each 35c: per doz. \$3.50.

GAILLARDIA—Blanket Flower

G. grandiflora. One of the showiest of the perennials, excellent cut flowers. Each 200; per doz. \$2.00; per 100 \$10.00.

GERANIUM —Crane Bill

G. Sanguineum. A desirable plant with pretty cut foliage and bright crimson flowers. Each 25c; per doz. \$2.50.

GEUM—Avens

G. atrococcineum. A pretty border plant, growing about 15 to 18 inches high, producing showy bright colored flowers from May to June. Each 25c; per doz. \$2.50.

Double Hollyhocks

GRASSES—Hardy Ornamental

For single specimens, beds or groups on the lawn nothing gives a finer effect than these. They are now largely used in prominent positions in many of the public parks, etc.

Eulalia japonica variegata. A very graceful, tall variety from Japan. Long leaf blades, striped with green, white, pink and yellow. Each 35c; per doz. \$3.50.

Eulalia zebrina (Zebra Grass). The long blades of this variety are marked with broad yellow bands across the leaf. Each 35c; per doz. \$3.50.

Eulalia gracillima univittata. Of compact. habit, with a very narrow foliage of bright green color. Each 35c; per doz. \$3.50.

Eiymus glaucus (Blue Lyme Grass). A hand-some grass with narrow glaucous silvery foliage, well adapted for the border or edge of beds containing taller sorts. Grows about three feet high. Each 35c; per doz. \$3.50.

Erianthus ravennae (Plume Grass). Grows 8 to 12 feet high. It resembles the Pampas Grass, but blooms more abundantly. Each 50c; per doz. \$5.00.

Pennisetum japonicum. One of the most valuable for beds and specimens. 4-in pots, each 25c; dozen \$2.50.

Phalaris arundinacea (Variegated Ribbon Grass or Gardener's Grass). Large varie-gated foliage, an excellent grass for bordering large beds. Each 25c; per doz. \$2.50.

Gaillardias

GYPSOPHILA—Baby's Breath

Graceful border and rock plants with small flowers on light stems. Greatly prized for cutting. G. paniculata. Minute white flowers in gauze-

like sprays, exquisite in combination with other flowers when used as cut flowers. 2 to 3 feet. July and August. Each 25c; per doz. \$2.50.

July and August. Each 25c; per doz. \$2.50. **Gypsophila flore plena**. Beautiful double flowering form; flowers very large and pure white. A valuable subject for a hardy border. A great improvement on the single-flowered type and more lasting, the flowers forming miniature balls of white petals. 2 to 3 feet. July and August. 4-in. pots: Each 65c; per doz. \$7.00.

HELENIUM—Sneeze Wort

H. autumnale superbum. Golden yellow flowers in late summer. Each 25c; per doz. \$2.50.

HELIANTHUS—Hardy Sunflower

H. orgyalis. Medium sized yellow flowers in September.

H. soliel d'or. Double golden yellow flowers in August and September. Fine for cutting. Best of the helianthus. Each 25c; per doz. \$2.50.

HEMEROCALLIS—Yellow Day Lily

H. aurantiaca major. Rich Indian yellow with flowers in June.

H. dumortieri. Rich cadmium yellow, buds and reverse of petals bronze-yellow. Very dwarf. Blooms in June.

H. kwanso fl. pl. Double orange-yellow flowers in July. Each 25c; per doz. \$2.50.

HESPERIS—Sweet Rocket

H. matronalis. Deliciously sweet-scented flowers for the garden and for cut flowers. Each 30c; per doz. \$3.00.

HIBISCUS-Mallow

H. Crimson Eve. Creamy-white flowers with large crimson centers.
Each 25c; per doz. \$2.50; per 100 \$18.00.

H. Mallow Marvels. A robust type of upright habit, with abundance of flowers of enormous size in all the richest shades of crimson, pink and red. Each 35c; per doz. \$3.50; per 100 \$25.00.

HOLLYHOCKS

We have a popular list of these flowers grown in pots and will bloom this year. Double varieties in maroon, red, white and yellow. Also in the beautiful shade of Newport Pink.

Each 30c; per doz. \$3.00.

IBERIS - Perennial Candytuft

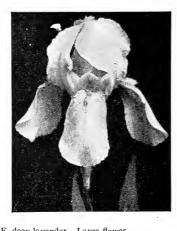

gibraltarica. Pinkish-white flowers. Each 25c; per doz. \$2.50.

IRIS Germanica

Fleur de Lis

SEE PAGE 9 FOR SPECIAL COLLECTION **OFFERS**

Pumila. Purple. Each 15c; per doz. \$1.25.

Cyanea. Deep velvety-blue; flowers large. Each 15c; per doz. \$1.25; per 100 \$7.50.

Bride. White with primrose beard. Each 20c; per doz. \$2.00.

Stewart alpina hybrata. Pure yellow. Each 20c; per doz.

\$2.00.

Fairy. Pale blue, fine. Each 18c; per doz. \$1.75.

LATHYRUS —Perennial Pea

L. latifolius. Hardy climbing pea. We have these in pink and white. Each 30c; per doz. \$3.00.

LAVANDULA—Lavender

L. vera. Thi This is the true sweet lavender; grows about eighteen nigh. Delightfully fragrant blue flowers in July and August. Each 25c; per doz. \$2.50

LILIUM—Lily

Outdoor culture. When planting Lilies out of doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border.

Spade over the ground thoroughly to a depth of 18 inches before planting Lilies and enrich it by adding equal portions of leafmold, peat and rotten manure. Plant the bulbs 4 to 6 inches deep, putting some sand under and around the bulbs.

L. candidum. candidum. The old-fashioned pure white garden lily. One of the hardiest. 5 and 6-inch pots: Each 50c; per doz. \$5.00.

L. auratum. Flowers very large, delicate ivory-white, thickly dotted with rich chocolate crimson spots. A bright golden band runs through the center of each petal. The finest of all lilies. 6-inch pots, each 75c; per doz. \$8.00.

L. rubrum. White, heavily spotted with rich crimson spots. 6-inch pots, each 75c; per doz. \$8.00.
 L. tigrinum fl. pl. (Double Tiger Lily). Orange-scarlet with dark spots. Each

50c; per doz. \$5.00.

L. tigrinum. Single form of the above. Each 50c; per doz. \$5.00.

. THE NEW REGAL LILY

Lilium regale or myriophyllum. Experiments have proven this new lily to be hardier than most kinds; so it is reasonable to expect that the glorious bloom which forces so easily for Easter time, will be as easily available to the amateur for its delightful unfolding within his own home. Many growers predict that Regal Lily will almost entirely supplant the older types of white forcing and garden lilies, within a very few years. The flowers are white, slightly suffused with pink; with a beautiful glow of canary-yellow at center; which continues part way up the trumpet. July. Each 85c; per doz. \$9.00.

LUPINUS—Lupine

L. polyphyllus. An effective plant, producing large spikes of clear blue flowers during the latter part of May and early June. Grows about 3 feet high. Each 35c; per doz. \$3.50.

LYSIMACHIA—MONEY-WORT

L. nummularia (Creeping Jenny or Money-Wort). Valuable for planting under trees or shrubs where grass will not grow, where it quickly forms a dense carpet. Each 20c; per doz. \$2.00, per 100 \$13.00.

LYCHINIS—Campion

The Lychnis are of easy culture, thriving in any soil; their bright colors have brought them in high favor with lovers of hardy plants.

L. calcedonica (Jerusalem Cross). Brilliant orange-scarlet flowers all summer, 2 to 3 feet high

L. haageana. Brilliant orange-scarlet flowers in May and June. 12 inches.

L. viscaria. Forms a dense tuft of evergreen foliage; flower spikes of double, deep red, fragrant flowers in June. 1 foot. Each 25c; per doz. \$2.50.

OENOTHERA—Evening Primrose

O. Missouriensis. Large yellow flowers, often 5 inches in diameter, p freely from June till August. Each 25c; per doz. \$2.50; per 100 \$15.00. Large yellow flowers, often 5 inches in diameter, produced

PACHYSANDRA—Japanese Spurge

P. terminalis. A trailing plant; glossy green foliage; spikes of flowers in May and June. A cover plant either in sun or shade. Each 20c; per doz. \$2.00; per 100 \$15.00.

PAEONIES—Herbaceous

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.
There is no flower that gives more pleasure to the grower than the Paeonia. It is probably the most showy spring flowering plant in our entire list of hardy plants Easy to grow, requiring very little care and attention, excepting fertilization annually of some well-rotted manure. Every garden should have a goodly supply of this valuable flower. All plants will be strong divisions with from three to five eyes.

In planting see that the eyes are about two inches below the level of the surface of the soil. Remember, too deep planting is one main cause of shy blooming. And, do not expect a full crop of blooms the first year. If properly planted you will have some flowers the first year but you must give the plants time to make new roots and become established before you can expect a normal crop of flowers. And another thing to remember: always leave at least two or three leaves on the stalk when you cut the bloom. This helps the plant store up strength to produce another crop of blooms.

Soil and Planting. Any good garden soil is good for peonies but do not plant in low, wet soil or in light, sandy soil, and do not use any fresh manure near the plant when setting, or for that matter at any time.

Charlemagne. Light pink, late. Each 50c; per doz. \$5.50.

Duchess de Nemours. Pure white, early. Each 50c; per doz. \$5.50.

Duchesse de Orleans. Deep pink, midseason. Each 50c; per doz. \$5.50.

Edulus Superba. Rose-pink, early. Each 50c; per doz. \$5.50.

Festiva Maxima. White, crimson-flecked center. Early. Each 50c; per doz.

Francis Ortegat. Purplish-crimson. Midseason. Each 75c; per doz. \$8.50.

Gen'l McMahon. Brilliant red. Midseason. Each 75c; per doz. \$8.50.

Livingstone. Pale pink, very good. Each 95c; per doz. \$9.50.

Mme. de Verneville. Pure white. Early. Each 50c; per doz. \$5.50.

Mme. Ducel. Silvery-pink. Midseason. Each 50c; per doz. \$5.50.

Mons. Krelage. Dark red. Midseason. Each 75c; per doz. \$8.50.

Officinalis Rubra. Crimson, fringed leaf. Early. Each \$1.15; per doz. \$12.00. Officinalis Rosea. Fringed leaf, pink. Very early. Each \$1.25; per doz. \$13.00.

Following is a list of unnamed sorts, which we are selling by color. All varieties in this list are of the best and are sure to please. 3 to 5-eye plants.

Pink and White. Each 40c; per doz. \$4.25.

Red. Each 50c; per doz. \$5.25.

PAPAVER—Poppy

Orientale Pink. Princess Louise. Each 35c; Orientale Red (Royal Scarlet). Each 35c;

per doz. \$3.50. Orientale Mixed. Each 25c; per doz. \$2.50.

PENSTEMON

P. barbatus (Chelone). Brilliant scarlet flowers in June and August. Each 25c; per

P. South Park Gem. A new variety, being on improvement on Barbatus Torrevi. an improvement on Barbatus Torreyi. Flowers of this variety are much closer together and showier on the spikes. The pleas-ing shade of deep coral pink flowers are proing snade of deep coral pink nowers are produced freely from June until frost. The plant is more compact in growth and at maturity is about thirty inches high. We have a limited stock of these plants for Spring, 1928. This variety should be planted in every garden. Each 30c; per doz. \$3.00.

PHYSOSTEGIA (False Dragonhead)

Physostegia Virginica Nana. Dwarf in habit attaining a height of twelve to eighteen inches, very free flowering, color lavender pink, produced on closely set spikes. July and August. Should be in every collection. and August. Should be Each 25c; per doz. \$2.50.

PHLOX DIVARICATA CANADENSIS

One of our native varieties that is but rarely One of our native varieties that is but rarely met with, and which has been introduced in Europe the past few years as a novelty. A plant that is certain to meet with much favor when better known, as nothing can produce such a cheerful corner in the garden in the very early spring; frequently beginning to bloom early in April, it continues until about the middle of June, with large, bright, illaccolored flowers, which are produced on stems about to inches high in large showy heads. about 10 inches high, in large, showy heads, and are very fragrant. Each 15c; per 10 \$1.25.

PHLOX SUFFRUTICOSA

Early Flowering Hardy Phlox.

Miss Lingard. A very fine white variety, begins to flower after the middle of June and continues throughout the season. Largely used for cut flowers. Each 25c; per doz. \$2.50; per 100 \$15.00.

HARDY PHLOX
The finest and most useful of the herbaceous plants. They succeed in almost any soil, or in any position, and flower throughout a long season. The plants remain in good condition for many years without attention, other than cultivating, and respond rapidly to improved cultivation and care.

cultivating, and respond rapidly to improve cultivation and care.

Planting. Phlox may be planted in the autumn, from September 15th to October 15th, so as to become established before winter; but when they are to be planted in conjunction with other perennials, wait until spring. Plant early, for Phlox puts out new growth as soon as the frost leaves the ground. Always mulch with well-rotted manure: this will be beneficial to the plants, both summer and winter.

Anton Buchner. One of the finest white varieties. Med.

Coquelicot. Clear scarlet with crimson eye.

M. Paul Dutrie. Delicate light rose.

Pantheon. Bright carmine rose.

R. P. Struthers. (Tall). Rosy cherry-red. Each 25c; per doz. \$2.50; per 100 \$15.00.

Elizabeth Campbell. Salmon-pink. Very fine. Each 35c; per doz. \$3.50; per 100.

fine. Each 35c; per doz. \$3.50; per 100 \$25.00.

Thor. Salmon-pink. Medium growth. Each 30c; per doz. \$3.00; per 100 \$20.00.

Salmon Queen (New). A beautiful clear salmon pink. Rivals Elizabeth Campbell. Strong, hardy grower. Large flowers and trusses. Each 40c; per doz. \$4.00; per 100 \$30.00.

Siebold. Orange-scarlet. Each 30c; per doz. \$3.00; per 100 \$20.00.

Special French. Light pink. Extra fine. Each 35c; per doz. \$3.50; per 100 \$25.00.

W. C. Egan. Pleasing shade of soft pink, very fine. Each 30c; per doz. \$3.00; per 100 \$20.00.

PHLOX SUBULATA-Moss or **Mountain Pink**

Mountain Pink

A pretty creeping type, with moss-like evergreen foliage, which in early spring is hidden beneath a mass of bloom. One of the very best plants in our collection for the rockery, and invaluable for covering graves or carpeting the ground. Grows about 6 inches high.

P. s. rosea. Bright rose.
P. s. alba. Pure white.
P. s. atropurpurea. Purplish-rose.
Each 25c; per doz. \$2.50.

Platycodon

PLATYCODON—Balloon Flower or Japanese Bell Flower

grandiflorum. Deep blue, cupped, starshaped flowers P. grandiflorum alba. Pure white star-

shaped flowers.

P. double white.

Same as Grandiflorum.

P. double blue.

Same as Grandiflorum.

Each 25c; per doz. \$2.50.

PLUMBAGO—Leadwort

larpentea. Of dwarf, spreading habit. Useful for an edging plant or for rockery, covered with beautiful deep blue flowers during the summer and fall months. Each 25c; per doz. \$2.50.

PYRETHRUM

P. grandiflorum roseum. Mixed colors.
P. hybridum fl. pl. In colors from deep red through the various shades of rose to pure white.

Each 30c; per doz. \$3.00.

RANUNCULUS—Crow Foot R. acris fl. pl. A double flowered form of our common buttercup. Blooms from May to June. Each 25c; per doz. \$2.50.

RUDBECKIA—Cone Flower
R. Iaciniata (Golden Glow). Flowers produced in enormous quantities on long stems and resemble golden yellow cactus Dahlias. Each 25c; per doz. \$2.50.
R. purpurea (Giant Purple). Flowers a peculiar reddish purple with a cone shaped center of brown. Blooms from July to October. Each 30c; per doz. \$3.00.

SALVIA—Meadow Sage
S. azurea. A Rocky Mountain species, growing about two feet high. Produces a great number of sky-blue flowers in August and September. Each 25c; per doz. \$2.50; per 100 \$15.00.

SEDUM-Stone Crop

The dwarf of creeping varieties; are suitable for rock work, covering graves, dry, sunny banks and carpet bedding.

S. acre (Golden Moss). Creeping, foliage and flowers bright yellow. Each 25c; per doz.

\$2.50.

S. album (White Stonecrop). 3 inches. White flowers during July and August. Each 25c; per doz. \$2.50.

S. spectabilis (Pink Stonecrop). I to 13/2 feet. August and September. The most popular variety both because of its ability to grow almost anywhere and the beauty of its light-pink flowers. Each 30c; per doz. \$3.00.

\$3.00.
S. spectabile brilliant. A rich colored form of the preceding, being a bright amaranth red, Each 30c; per doz. \$3.00.

STATICE—Great Sea Lavender S. latifolia. A most valuable plant either for

the border or rockery, with tufts of leathery leaves and immense candelabra-like heads Purplish minute flowers during July and August. Each 25c; per doz. \$2.50.

STOKESIA-Stokes Aster

S. cyanea. One of the prettiest and mest distinct hardy plants in our collection. It produces showy, aster-like deep lavender blue flowers from early in June until cut down by Each 25c; per doz. \$2.50.

THALICTRUM Meadow Rue

T. aquilegifolium atropurpureum. Ele-gant, graceful foliage and masses of rosy purple flowers in May to July. flowers in May to July

purper nowers in May to July.

T. dipterocarpum. A graceful border plant
about four feet high, with pretty, fine-cut
foliage, producing lemon-yellow flowers in
August and September. Each 30c; per doz. \$3.00.

TRITOMA—Torch Lily

P. pfitzerii. A grand improvement on Tritoma Uvaria Grandiilora. The spikes which are produced with considerably more freedom than in the old variety, are of gigantic size, frequently four and a half feet high, and with heads of bloom over twelve inches long of a sich paragra exertly shading the long, of a rich orange scarlet, shading to salmon rose on the edge. Each 30c; per doz

VERONICA-Speedwell

Most desirable hardy plants, the fall growing sorts being admirably adapted to the border while the dwarf varieties are excellent rock plants

V. amethystina Amethyst blue, flowers in

V. amothystina Ametalyty
June and July.
V. incana. Bright, silvery foliage, with
spikes of amethyst blue flowers.
V. longiflora subsessillis. Should be planted
in the spring; begins to bloom in mid-July
and continues to mid-August. Flowers deep
blue. Should be mulched in winter and

and continues to mid-August. Flowers deep blue. Should be mulched in winter and watered at times during dry weather.

V. spicata. A fine border plant, producing long spikes of white flowers.

V. spicata rosea. A fine border plant, producing long spikes of rose colored flowers.

Each 25c: per doz. \$2.50.

VINCA-Trailing Myrtle.

V. minor. An excellent dwarf evergreen trailing plant that is used extensively for carpeting the ground under shrubs and trees or on graves, where it is too shady for other plants to thrive. Each, 15c; per doz. \$1.50; per 100

VIOLAS—Violets
V. Prince of Wales (English). Hardy and sweet scented. Each 25c; per doz. \$2.50.

YUCCA-Adam's Needle, or Spanish Bayonet

Y. filamentosa. Among hardy ornamental foliage and flowering plants this can be classed at the head of the list. Its broad sword-like foliage and tall branched spikes of large flagrant, drooping, creamy white flowers make it an effective plant for all positions. Each 30c; per doz. \$3.00.

Yucca

Greenhouse Department

We have quit growing Cut Flowers and are now devoting our entire range of glass to the growing of pot plants for spring planting and to the propagation of Hardy Perennials.

TIME OF SHIPMENT. We will ship all orders at the best time for planting. If you want special shipments made on certain dates, please state

so on your order.
METHOD OF SHIPMENT. METHOD OF SHIPMENT. Greenhouse plants should never be shipped by freight. Express is the proper way to ship this class of plants. PARCEL POST SHIPMENTS. Add to per cent to amount of bill for local, first, second and third zones; 15 per cent for fourth and fifth zones, and 20 per cent for sixth and seventh zones. We are in St. Louis, Mo., zone.

Ageratum

ACHYRANTHUS

Brilliantissima. Bright red foliage. Each Ioc; per doz. \$1.00.

AGERATUM-Floss Flower

Stella Gurney. A fine dwarf blue, fine for bedding and borders.
Each 10c; per doz. \$1.00.

AGLAONEMA

A. costatum. A dwarf-growing Aroid, suitable for the conservatory or window garden.
Very compact heart-shaped leaves of dark, shining green, with white midrib and scattering blotches of white. Each 75c.

ALTERNANTHERA

Bright foliage plants of dwarf habit, much used for carpet bedding.

Aurea Nana. Dwarf growing, bright yellow and green foliage.

Brilliantissima. Rather broad leaves, bushy growth; mottled bronze and cream, but mostly bright red.

Each Ioc; per doz. \$1.00.

ALYSSUM-Sweet Alyssum

Little Gem (Carpet of Snow). The dwarf white variety so much used for edging. Each 10c; per doz. \$1.00.

ANTHERICUM

A. vittatum variegatum. A most desirable plant for window boxes, vases, or for growing as a single specimen in pot long narrow green leaves edged with white. Each 3oc.

A. mandaeanum. Similar to the above in

habit, but with narrower foliage, the leaves being green on the edges with creamy white center. Each 30c.

ANTHIRRHINUM—Snapdragon

Daphne. Soft blush pink.
Golden Queen. Rich, pure yellow.
Firebrand. Rich, deep red.
Mont Blanc. Pure white.

Each 15c; per doz. \$1.50 **ASPARAGUS**

Sprengeri. Graceful pot plant for house decoration or for hanging baskets. According

to size, 25c, 5oc, 75c each.

A. plumosa. Each 15c and 25c, according to

ASPIDISTRA

ASPIDISTRA

The Aspidistra is the easiest of all decorative plants to grow well. Give it a loamy soil and plenty of water, and it will ask for nothing more. A useful plant for the veranda in summer, and for hardiness has no equal as a house plant at any season. It will succeed even in a comparatively dark hall where few other plants would live.

Lurida. Green leaved.

According to size, 50c, 75c, \$1.00.

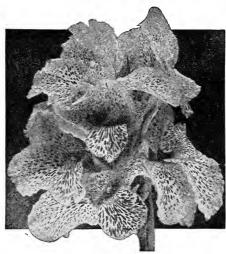

BEGONIA—Four Varieties

According to size, 25c, 35c, 75c, \$2.00 each.

BOUGAINVILLEA

BOUGAINVILLEA

B. crimson lake. On first opening a brilliant crimson-lake, retaining this color for three or four weeks, after which they gradually pass to a crimson-carmine. In Southern California and Florida, the Bougainvilleas make gorgeous climbers for outdoor planting, while in the north they are useful subjects as pot plants for the conservatory or greenhouse. Plants in 4-inch pots, \$1.00 each; strong 5-inch pots, \$1.50 each.

Yellow King Humbert Canna

CANNA

crozy. Very brilliant and attractive, rich crimson scarlet bordered with golden yellow, 3 1/2 feet.

Allemania. Orchid flowered. salmon with golden markings. 5 feet. American Beauty. Velvety oriental car-mine or translucent cerise. Very free flowering. 5 feet.

Burbank. Yellow. 3 feet. Thickly spotted in the throat with bright scarlet.

City of Portland. A new variety of a good deep clear pink; the full petaled trusses are borne freely on heavy stalks, continuing throughout the summer. 3½ feet.

David Harum. Dark bronze foliage; grand grower and free bloomer; fine large flowers with round petals. Bright vermilion-scarlet, dotted with crims on spots. 3½ feet.

Florence Vaughan (4 feet). Speckled, red or values.

or yellow.

Jean d'Arc. Deep pink. 4 feet.
King Humbert. Bronze leaf, flowers 6 inches
in diameter, brilliant orange scarlet with
bright red markings. Good bedding variety.

5 feet.

Louisiana. Soft, glowing scarlet, with orange throat. 6 feet.

Meteor. Bright blood-red flowers. 5 feet.

The President. Most sensational introduction of recent years. Largest flowered, most vigorous growing red Canna. This variety should have a place in every collection.

Victory (3 feet). A delightful, dainty dwarf type, Creamy ecru toned with shell pink and chamois; rounded florets with crimpled edge in full, compact, self-cleaned trusses.

Yellow King Humbert. A sport of the red flowered King Humbert. Flowers yellow, dotted orange-scarlet.

dotted orange-scarlet.

Prices on above varieties: Potted Plants.
Each 20c; per doz. \$2.00.

COLEUS

Best plants for carpet bedding and borders for Canna beds.

for Canna peus.

Christmas Gem. Leaves very broad, the underside a bright, yellowish green which carries over and beyond the beaded edge until lost, after fiftul struggling, beneath a covering surface of oriental red. Over all lies a distinct sheen of old rose, pointed here and there with pearl and carmine. A beautiful pot plant for conservatory use. Prices 15c, 25c, 35c and 50c, according to size pot. size pot.

Flambeau Golden Bedder Brilliancy Chicago Bedder Prince Leopold Setting Sun Vershaffelti Defiance.

2½-inch pots—Each 10c; per doz. \$1.00; per 100 \$6.00.

Trailing Coleus. For baskets and window boxes.

3-inch pots. Each 15c; per doz. \$1.50. 2 1/2-inch pots. Each 10c; per doz. \$1.00.

CROTONS

Splendid decorative plants for conservatory use or for use in carpet bedding. Fine selection of variety.

According to size, 30c to \$2.00 each.

DRACENA

Noted for the odd and beautiful foliage.

D. fragrans. An excellent house plant with broad, dark-green foliage; grows under the most adverse conditions. 4-inch pots, 75c

D. kelleriana. Entirely different from the other varieties. Rather compact. Foliage of a leathery texture, rich dark green color, densely marked with spots of creamy white. 4-inch pots, 75c each.

D. massangeana. Broad, green foliage with vellow band through the center. 4-inch pots, \$1.25 each.

D. Mrs. Ed. Andre. One of the finest high-colored varieties yet introduced, with heavy bronze foliage developing to an intense brilliant rosy-carmine. 4-inch pots. 750 each.

D. sanderiana. A distinct and pretty variety with glaucous green foliage, edged with a broad border of creamy-white. 3-inch pots,

D. terminalis. Rich, crimson foliage, marked with pink and white.

According to size, 50c to \$3.00 each.

FERNS

each.

Dwarf Boston. Similar to the well - known Boston Fern, only more compact.

Roosevelt. Dwarf compact grower.

Teddy, Jr. Very
dwarf form of
the Roosevelt.

Verona. Very
fine foliage.

According to size, 50c to size, 50c \$3.00 each.

Dwarf Boston Fern

FERNS-For Fern Dishes

We have at all times a good supply of the most desirable varieties.

Pteris rivertoniana.

Pteris alba liniata. Aspidium tessineuse. Holly Ferns.

21/4-inch pots: 15c each; \$1.50 per dozen.

FUCHIAS

Each 15c and 25c.

GERANIUMS

Our list of geraniums is not a long one, but is made up of the most popular bedding sorts.

Beauty poitevine. Rosy-salmon.

Bertha de Pressily. Double delicate pink.

Francis Meehan. Very pretty double pink

Jean Pabon. Blood-red with small white eye.
John Doyle. Semi-double, vermilion-scarlet.
Madam Barney. Double, brilliant rose.
Madam Landry. Semi-double, salmon shaded

orange.

Mme. Recamier. Double pure white.

Mrs. E. G. Hill. Beautiful salmon, single.

Mont Mart. Purplish color.

Red Barney. Double red.

Ruby. Double crimson.

S. A. Nutt. Double, rich dark crimson.

Scarlet Bedder. Rather dwarf, semi-double, dark fiery red flowers.

Tiffin. Rich glowing scarlet, shading to crimson on upper petals; single.

Above varieties, each 25c; per doz. \$2.50; per 100 \$18.00.

IVY AND SCENTED GERANIUMS

lvy Leaved. Fine for baskets or vases or where a

trailing or climbing plant may be desired.

Scented Leaves.

Noted for their scented leaves. We have the rose lemon and nut meg.

Each 25c; per doz.\$2.50; perioo \$18.00

HEDERA-Ivy

HEDERA—Ivy
H. helix (English Ivy). A familiar evergreen vine, dark green leaves, favors shady locations. The young wood sometimes winterkills in this section, due to the action of the sun more than the cold. Suitable to cover buildings, rocks, trellis work, graves and as a carpet under trees in places whire grass will not grow.
5-inch pot plants, each 60c; per doz. \$6.50.
4-inch pot plants, each 50c; per doz. \$5.50.
3-inch pot plants, each 35c; per doz. \$3.75.

HELIOTROPE

A favorite flower with everyone. Each 25c; per doz. \$2.50.

HIBISCUS

Sinensis. Single, red and pink; double red and pink.

According to size: Each 25c, 50c, 75c, \$1.00, \$1.50.

LANTANA

Well known useful summer bedding plants; the varieties offered are of dwarf habit.

Comtesse de Biencourt. A splendid pink. M. Schmitt. A fine yellow. Leo Dex. A fine red.

Each 25c; per doz. \$2.50.

LANTANA

Weeping. Showy bedding or basket plants. Each 20c; per doz. \$2.00.

MARANTA

Beautiful variegated foliage plants, suitable

beautiful variegated inhage plants, suitable for the warm conservatory.

M. rosea liniata. Rich deep green leaves beautifully variegated with many narrow lines of a soft salmon-rose. 4-inch pots

M. vanden heckel. Rich dark green leaves beautifully variegated with silvery-white. 4-inch pots, \$1.50 each.

MARIGOLD

Both the African and French sorts are among the most popular annuals for bedding and for flowers.

Golden Ball (French). Pure golden-yellow, a

ofder Ball (French). Light lemon-yellow. Each 15c; per doz. \$1.50; per 100 \$10.00.

MOONFLOWER

Mexican. The fastest growing climbing annual. Each 20c; per doz. \$2.00.

PELARGONIUMS-Lady Washington Geraniums

Easter Greeting. Each 25c, 35c, 50c.

PHILODENDRON or MONSTERA

Giganteum. Of strong climbing habit, with large deep green foliage, a splendid wall plant for a warm conservatory. Each 15c; per

PANSY-Mammoth Strain

We will have ten thousand to offer this spring. Per doz. 75c; per 100 \$5.00.

PALMS

Kentia Belmoreana. Of dwarfer habit than Fosteriana, but with more spreading leaves. The Kentias are the hardiest house plants. They are of slow growth and are less affected by dust and dry atmosphere.

by dust and dry atmosphere.

Kentia Fosteriana. Of taller habit than the belmoreana. somewhat heavier foliage.

Phoenix roebeleni. Most graceful of the Phoenix and a palm which has become one of the most popular for room decoration. Graceful recurving leaves, with narrow dark green pinnae give it a lightness and airiness not surpassed.

According to size, \$1.00 to \$3.00.

Salvia

PANDANUS

Pandanus Veitchii (Screw Pine). One of the best and most attractive decorative plants for the house. The leaves are light green, beautifully marked with stripes of white and gracefully curved.

According to size: Each \$1.00 to \$5.00.

PENNISETUM—Fountain Grass

Tender ornamental grasses, valuable either as individual specimens in the garden or for massing. For border plants for canna beds nothing equals them.

Pennisetum cooperianium. Pretty bronze foliage and grows three to four feet tall. Fine for edging canna beds. 3-inch pots, each 25c; per doz. \$2.75.

eaul 450; per GOZ. \$2.75.

Pennisetum longistylum. Extremely graceful greenish plumes; excellent for bedding purposes. 3-inch pots, 15c each; \$1.30 per doz.

PETUNIA

Double Fringed Mixed. 4-inch pots, 25c each; \$2.50 per doz.

Single Giant Fringed Mixed. 4-inch pots,

25c each; \$2.50 per doz.

Rosy Morn. Soft rose-pink. Each 15c; doz.
\$1.50; per 100 \$10.00.

PLUMBAGO

Capensis. Light lavender-blue. Each 15c; per doz. \$1.50.

SALVIA-Scarlet Sage

Zurich. A splendid dwarf variety, growing about two feet high, and is especially valu-able on account of being the earliest to bloom, flowering ten days in advance of any other

4-inch pots, each 20c; per doz. \$2.00; per 100

SANSEVIERA

eylanica. An elegant variegated plant, especially adapted for house decoration, the thick, leathery leaves standing the heat and dust of the house with impunity. Zevlanica.

dust of the house with implinity.
According to size, 7,5c to \$1,50 each.

Zeylanica Laurenti. This plant has a band of creamy-yellow, varying from \$\frac{1}{2}\$ to \$\frac{1}{2}\$ in or or more in width on each edge of the leaves, which adds greatly to its decorative effect. 4-inch pots \$1.25.

SANTOLINA—Lavender Cotton

S. incana. A dwarf evergreen perennial with attractive, silvery-white follage; useful as a rock or border plant, and largely used for carpet bedding. Each 10c; per doz. \$1.00; per 100 \$6.00.

TRADESCANTIA

Wandering Jew. Splendid plants for basket and window boxes. Each 10c; per doz., \$1.00.

VINCA—Vine

Major Variegata. A popular plant for vases, baskets and window boxes, trailing vines. According to size, 25c each; doz. \$2.50.

VINCA—Periwinkle

A splendid plant for bedding or for borders, grows 18 to 24 inches high. Always clean and blooms continuously throughout the summer.

blooms continuously throughout the Flowers single.

V. alba. White.
V. aurea. Rose.
V. aurea reticulata. White with red eye.
Each loc; per doz. \$1.00; per 100 \$6.00.

VERBENA

We have a nice collection of assorted colors. Each 10c; per doz. \$1.00; per 100 \$6.00.

AQUATIC PLANTS FOR AQUARIUMS

Fish will not thrive unless some plants are growing to supply oxygen.

CYPERUS-Umbrella Plant

Alternifolius. A splendid aquatic plant. According to size, each 25c to 50c.

EICHORNIA—Water Hyacinths
Crassipes Major. A very free-growing and showy floating aquatic, bearing flowers of delicate flac rose in trusses like a hyacinth.
Does splendidly out doors in summer. Each 15c; per doz. \$1.50.

MYRIOPHYLLUM-Parrot's Feather mikiuphitlum—parrot's feather Properpinacoides. Long, trailing stems, clothed with whorls of the most exquisite foliage, as delicate as the cypress vine. An aquatic plant. Each roc; per doz. \$1.00.

Fruit Department

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS

ATTENTION BUYERS OF NURSERY STOCK

Please note that we specify age, caliper and approximate height of our fruit trees; there is no guesswork when you buy from us. Kindly remember this when placing your order.

Preparation of the Soil .- For fruit trees the soil should be dry, Preparation of the Soil.—For fruit trees the soil should be dry, either natural or made so by thorough drainage, as they will not live or thrive on a soil constantly saturated with stagnant moisture. The soil should be well prepared by plowing at least twice beforehand, using a subsoil plow after the common one at the second plowing. On new, fresh land manuring will be unnecessary, but on lands exhausted by cropping, fertilizers must be applied, either by turning in heavy crops of clover, or well decomposed manure or compost. To insure a good growth of fruit trees, lands should be in as good condition as for a crop of wheat, corn or postates. corr or potatoes.

Preparation of the Trees Before Planting.—This is one of the most important operations to be performed, and one in which the most fatal errors are liable to be committed. The object of pruning is twofold: First, to secure a head properly shaped and sufficiently open to the sun and air for the successful ripening of the fruit. Second, to prepare the natural balance between the roots and branches of the trees, that a healthy growth may be secured.

In both Standard and Dwarf Trees, it will be usually found a safe rule to cut back, when pruning at transplanting, one-half of the growth of the previous season. The ends of the large roots should be made smooth with a sharp knife, where they have been roughly cut with the spade in

digging, always cutting from the bottom of the root with an outward cut. New roots will form, and the injured parts heal more readily with this attention

Pruning Fruit Trees.—Pruning after the first year should be varied according to the purpose of the planter and the variety of the tree. It should be trimmed as early as possible up to the height it is intended the future head should be, and the cutting off of large limbs may not in the future be necessary. The removal of large branches should be avoided in all cases whenever it is possible to do so, as decay is liable to commence at the point of separation and extend into the trunk; whenever it is done the wound should be carefully pared smooth and a coating of paint or grafting wax applied to protect the action of the weather. After the removal of lower branches until the head has reached the desired height, the only pruning needed is to remove such branches as are crossing and interfering with each other, and keep the heads in a symmetrical shape and well open to the sun and air. Trees should receive proper shape by judicious pruning and attention early in the spring of each year, while they are young, and very little pruning will be necessary afterwards. When trees are to be pruned and trained for specific purposes and in a special manner, the orchardist will find full directions in the standard works on horticulture which may be read with great benefit and followed with success, but are beyond the scope of an ordinary catalog. with success, but are beyond the scope of an ordinary catalog.

Use **SCALECIDE**, the best dormant spray. Contains a fungicide which no other miscible oil has. Kills Scale, controls Scab, Blotch, Fire Blight, Cankers and all fungous troubles which harbor on the trees during the dormant period. **See page 44.**

Standard Apple APPLES YIELD PROFITABLE RETURNS

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS

Owing to its adaptability to various soil conditions, its hardiness, productiveness and commercial value, we must consider the apple the most important of our tree fruits. Planted only in well-drained soil, with proper care taken in the selection of varieties one may expect fruit from early summer throughout the winter months. An acre or so devoted to apples, properly planted and with ordinary attention to pruning and cultivation will yield very satisfactory returns. Our list has been further reduced to only the most dependable sorts, and those listed below may be planted with confidence. As the trees develop, the trimming out of the cross and crowded branches is all the pruning required.

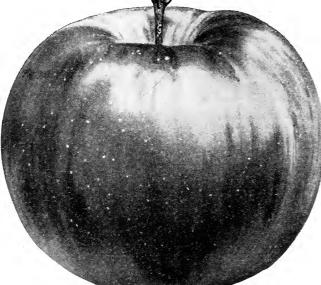

When pruning Apple trees permit 3 to 5 well developed branches to remain, but shorten these to 6 to 8 inches.

PLANT standard apple trees from 30 to 40 feet apart each way, according to the nature of the soil.

At 30 feet apart it takes 48 trees per acre; 40 feet apart it takes 27 trees per acre.

Wealthy

SUMMER OR EARLY VARIETIES

Early Harvest. Medium to large, flat, pale yellow; good. Tree a fair grower and bearer. July.

Oldenburg (Russian). Medium to large; striped, mostly red. best summer cooking apple; tree hardy, early and a good bearer. July and August.

Red June. Medium size, red; flesh white, tender, juicy, sub-acid; an abundant bearer. July.

Yellow Transparent (Russian). Skin clear white, changing to pale yellow when fully ripe; flesh white, tender, sprightly subacid; good early bearer. July.

AUTUMN VARIETIES

ing David. A beautiful apple, resembles Jonathan in color. Tree strong, vigorous grower, healthy, bears young. September. King David.

Maiden Blush. Large, flat, pale yellow; beautiful blush: mild, sub-acid; valuable for market, cooking and drying. September.

'ealthy. Fruit medium, oblate, skin smooth, whitish-yellow, shaded with deep red in the sun, splashed and spotted in the shade. Flesh white, tender, juicy, sub-acid, very good. August to September.

EARLY WINTER VARIETIES

rimes. Medium to large, roundish, oblate, slightly conical, large specimens oblong. Skin yellowish-white, with a mild subacid, agreeable good to best flavor. September to December.

Jonathan. Medium size, unless thinned on tree, when it becomes a fair size; form roundish, conical; skin thin and smooth, the ground clear, light yellow, nearly covered with lively red stripes and deepening into brilliant or dark red in the sun; flesh white, rarely a little pinkish; very tender and juicy; mild, sprightly vinous flavor. September to December.

WINTER VARIETIES

Arkansas (Mammoth Black Twig). A seedling of Winesap, which it resembles in every way except that the tree is a better and much more vigorous grower, more hardy, and the fruit is much larger. Color dark red; flesh firm; flavor mild. A good keeper. One of the best. October to May.

Arkansas Black. Large, very dark red, smooth, roundish flat, lightly dotted white: flesh yellow, sub-acid: long keeper. November to April.

lack Ben. Of the Ben Davis type, said to be better than Gano. Fruit large, deep red, long keeper, good shipper and sells well on the market. September to February.

This variety should be in every orchard. large, almost covered with beautiful dark red, blending to yellow at the blossom end. Sweet, pleasant flavor, only enough acid to make it pleasing. Flesh crisp, juicy, fineenough acid to make it pleasing. Flesh cigrained, melting. September to February.

ten Davis. Large, roundish, oblong, red striped, very hand-some. Mild, sub-acid, not rich. Tree very vigorous, hardy and productive. This is one of the safest and most profitable market apples grown in this country at present. October to March. Ben Davis

Gano. Tree very healthy, vigorous, hardy, having stood 32 degrees below zero without injury. A rapid grower, large and spreading in orchard. Color bright red without stripes or blotches. Similar but superior to Ben Davis. Large and even in size. Prolific bearer and a good keeper. October to March.

orthwestern (Greening). A Wisconsin seedling of great promise, having taken first prize at their state societies. Tree a good grower and hardy. Fruit yellow, smooth, rich, of good size, resembling Grimes' Golden in shape and color. Good quality. November to December. Northwestern (Greening).

Rome Beauty. Large roundish flat; bright red, mild, sub-acid, very good. A good grower and early bearer. November to March.

Spitzenburg (Esopus). Large, round, brilliant red, with gray dots. Flesh firm, rich, crisp, juicy, delicious. A fine apple where it succeeds. October.

Tree is a vigorous grower, drooping in habit and adapts itself to soils and situations; fruit large size, bright red color and produced in large quantities. A profitable market variety. October to March.

York Imperial

Delicious Apple

Winesap. **/inesap.** Medium, conical, dark red; very smooth. Acid to sub-acid, julcy and rich, very valuable for both family and market. Tree very hardy and an early and constant bearer. December to April.

Huntsman. Fruit large, flat, deep yellow; very mild, sub-acid, fine-grained. Very good. Valuable for family and market. Tree fair grower and good bearer, but does not bear heavily while young. October to April.

Yellow Bellflower. Large to very large: oblong, pale yellow, sometimes blushed; acid to sub-acid, rich and good. Tree a fine spreading grower and hardy. October to January.

York Imperial. Medium to large, oblate; color white, shaded with crimson; flesh firm. crisp. juicy and sub-acid; a good bearer and keeper; one of the best winter apples. November to April. apples.

Janet (Rawles). anet (Rawles). Also called Geneton. Medium to large when grown on good soil and not allowed to overbear; flat, conical striped, red. sub-acid; very good for market and family use. Good cider apple. October to April.

CRAB APPLES

Same price as Apple.

orence. Originated in Minnesota. Fruit medium in size; color carmine when well colored; flesh yellowish, fine, acid. Excellent for cooking and fir jelly. Valuable for early market. Tree hardy and spreading; bears when young and inclined Florence. to overbear.

Transcendent. Medium size; flavor pleasant and agreeable; extremely hardy. Hyslop. Large size, beautiful dark crimson. Hangs in clusters.

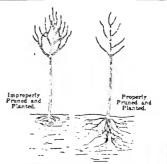

Table Showing Number of Trees or Plants to the Acre

Distance.	No. of trees.	Distance.	No. of trees
I foot apart each way	43,560	12 feet apart each way	302
2 feet apart each way		13 feet apart each way	257
3 feet apart each way	4,840	14 feet apart each way	222
4 feet apart each way	2,702	15 feet apart each way	193
5 feet apart each way	I .742	16 feet apart each way	170
6 feet apart each way	I,2I0	17 feet apart each way	I50
7 feet apart each way		18 feet apart each way	134
8 feet apart each way		19 feet apart each way	I28
g feet apart each way	537	20 feet apart each way	
Io feet apart each way	434	25 feet apart each way	68
II feet apart each way	360	30 feet apart each way	40
Rule - Multiply the dis-	tance in feet between t	he rows by the distance the plan	

rows, and the product will be the number of square feet for each plant or hill, which, divided into the number of feet in an acre (43,560), will give the number of plants or trees to the acre.

Distances for planting various fruits will be given under respective headings in this catalogue.

Proper planting and cultivation with correct pruning is the best insurance on an orchard.

Dig a square hole 24x24x18 inches.

Peach

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.

The Peach is probably the finest of our fruits; everybody delights in the flavor of a fine, juicy Peach. In this section, select high, dry lands, northern or western exposure preferred.

Pruning at time of planting. Cut away all side branches to within 2 inches of the body and shorten the leaders to form a balanced low and compact head. Branches that are too low should be cut somewhat to the body.

that are too low should be cut somewhat to the body.

In order to preserve the continued healthy growth of the trees and the fine quality of the fruit, the trees should have careful pruning at least every two years, so as to preserve a round, vigorous head, with plenty of young wood. The land should not be seeded to grass, but kept in constant cultivation. Fertilize with occasional crops of Cowpeas, Rye or other legume, plowing the crop in while in green state. Wood ashes are a fine fertilizer where it can be obtained. When borers appear on trees under five years it is best to hunt them and destroy. This should be done annually in May and September. They are found just under the ground level, directly above the roots. When the trees attain the age of five years, the borer can be killed by using "Paradich-lorobenzene." This is a new crystal, which when put around tree, and covered over with ground, will kill by the gases which form. For further information, write us. For Scale Insects, use "Scalecide" in the fall after leaves have fallen.

We have this year arranged our Peach list as nearly as possible according to time

We have this year arranged our Peach list as nearly as possible according to time of ripening. We think this will make it easier for our customers to make up their order, beginning with the earliest and on through the list to the latest.

Plant Peach 20 feet apart, 109 trees to the acre.

	Each	10	100
I-year, II/16 and up, 5 to 7 ft			
I-year, 9/16 to 11/16, 4 ½ to 6 ft		4.50	\$35.00
I-year, 7/16 to 9/16, 3 ½ to 4 ft	.40	3.50	25.00

Peach are in exceedingly heavy demand and stock is limited. Place your order early while our stock is complete.

Wheeler (Red Bird Cling). Fruit larger than Greensboro, round, flesh white, juicy; tough skin nearly covered with deep red. A good shipper. July 1st to 5th.

Mayflower. Originated in North Carolina; very early; color perfectly red; a valuable market sort. Perfectly hardy in bud and a heavy cropper. July roth to 15th.

Greensboro. The largest and most beautifully colored of the extra early peaches: A freestone; flesh white, juicy and excellent. July 10th to 15th.

Carman. Large, resembles Elberta in shape; color creamy white, with deep blush; skin very tough; flesh tender, fine flavor and quite juicy. One of the hardiest in bud. In shipping qualities and freedom from rot it is unsurpassed. Profitable market variety. July 10th to 15th.

Belle. Very large; skin white, with red cheek; flesh white, firm and excellent flavor; the fruit is uniformly large and showy; a very prolific bearer. July 15th to 20th.

Mamie Ross (Cling). Very large, oblong; color similar to Chinese Cling, but has more of a red cheek. With us one of the best early clingstones. July 20th to 25th.

Goldfinch or Early_Elberta

Carman

Rochester. A new yellow freestone variety. The fruit is large, yellow, sweet, juicy and of delicious flavor, keeping and shipping well; skin prettily blushed. Tree strong grower and hardy; prolific bearer. Ripens about July 25th.

Crawford Early. The best early yellow freestone; one of our oldest varieties. Ripens about August 1st.

Champion. Originated at Nokomis, Ill. Flavor delicious, sweet, rich, juicy, surpassing all other early varieties. Skin creamy white with red cheek. Early, productive and large. Perfect freestone. August 10th to 15th.

Goldfinch (Early Elberta): Color beautiful yellow, red on the sunny side; flesh juicy and sweet. August 10th to 15th.

Ede. Large to very large; a rich orange yellow: flesh yellow, small stone; melting, rich, highly flavored. Freestone. August 15th to 20th.

Elberta. Supposed to be a seedling of Chinese Cling, but is entirely free. Very large, yellow, with red cheek; flesh yellow, firm, juicy and of high quality; exceedingly prolific; sure bearer and hardy. August 15th to 20th.

J. H. Hale. "Everybody has heard of this variety; ripens about the same time as Elberta; said to be larger and better flavored; highly colored." We have only a limited number to offer this year. August 15th to 20th.

Rex (Late Elberta). Almost identical with Elberta, but ripens several weeks later. Fine market peach, good shipper.

Crawford Late. Ripens from 14 to 20 days later than the Crawford Early and is larger in size; color about the same, only a little darker red and yellow. One of the best and finest yellow freestones; moderately productive. August 25th to 30th.

Stump. Very large, roundish; skin white, with bright red cheek; flesh white, juicy. One of the best late freestones. September 1st to 5th.

Golddust. A large, fine peach in every respect; color, bright yellow shaded with red; juicy, sweet; valuable for canning.

Picquet. Large yellow with red cheek. Rich and sweet and a better flavor than Salway. Freestone.

Ringold. A good late clingstone. White, 10 days earlier than Heath Cling.

Salway. Large, creamy yellow, with crimson cheek; flesh deep yellow, juicy, rich, sweet. September 15th to 20th.

Heath Cling. One of the finest canning peaches; good size; lemon shape; tree a good grower and excellent bearer. September 15th to 20th.

Krummel's Late. Found in an orchard on property of Mr. Krummel of St. Louis. Color a rich golden yellow, with bright red cheek; round, free-stone; juicy. Ripens here about October 5th, and is a good keeper.

October Beauty. A late yellow cling. When ripe, a dark purple. Originated on the grounds of Judge Hugo Muench of St. Louis. We recommend it as the best late yellow cling. October 5th to 10th.

Spray Your Orchard Regularly Each Year With

Keeps Your Trees Healthy; Kills All Kinds of Scale
See page 44.

Cherry SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS

The Cherry is one of the finest and most delicate dessert fruits. The acid varieties are also highly esteemed for preserving and cooking purposes. Although a very perishable fruit, the period of its use may be prolonged to six weeks by a proper selection of varieties. The trees thrive well in any soil which is sufficiently well drained, but will not succeed a long time where the sub-soil is wet.

Our Cherry trees are all budded on Mahaleb stock, which makes a healthy tree, and does not sprout from the roots, which is a nuisance when common Morello stocks are used. Plant 20 feet each way; too trees to the acre.

Pruning at time of planting. Sour Cherry should have at least one-third the previous year's growth taken off in such a manner as to leave a supportance with the previous year's growth taken off in such a manner as to leave a supportance with the previous year's growth taken off in such a manner as to leave a supportance with the previous year's growth taken off in such a manner as to leave a supportance with the previous year's growth taken off in such a manner as to leave a supportance with the previous year's growth taken off in such a manner as to leave a supportance with the previous year's growth taken off in such a manner as to leave a support year.

Pruning at time of planting. Sour Cherry should have at least one-third the symmetrical well balanced head.

Sweet Cherry should have at least one-half or more of the young wood pruned back leaving center limb a little higher than the sides.

Spray Cherry trees with SCALECIDE in the fall or spring. For summer spray use Sulfocide. This will control the shot-hole fungous which affects Cherry trees during the summer, often defoliating the entire tree. Ask us about it.

Cherries sprayed with Sulfocide and soap when ripening will greatly extend picking season. The material is non-poisonous and does not show on the fruit.

SWEET VARIETIES

	Each	10	100
Extra selected	1.00	\$9.00	\$75.00
2-year, 9/16 to 11/16, 4 ft. and up	.90	8.00	60.00

Bing. Very large, dark brown—almost black; flesh firm, sweet, rich and delicious. A noted western sort. Late.

Spanish (Sweet). Large, pale yellow, firm, juicy and excellent. One of the best light colored cherries. Tree productive and a fine grower.

Schmidt. Immense size, deep black, flesh dark, tender, very juicy, fine flavor; productive, Lulv.

Tuly. Barbarian (Black). Very large, black, juicy, rich. E Wood. Large, light red, juicy, rich, delicious. June.

DUKE AND SOUR VARIETIES

		10	
2-year, extra selected trees. 2-year, 11/16 and up, 4½ ft. and up. 2-year, 9/16 to 11/16, 3½ ft. and up.	.90	\$7.50	\$65.00

DUKE VARIETIES

Medium, dark red, melting, rich, juicy, excellent. A reliable early May Duke. Medium, dark red, melting, rich, juicy, excellent. cherry, nearly sweet.

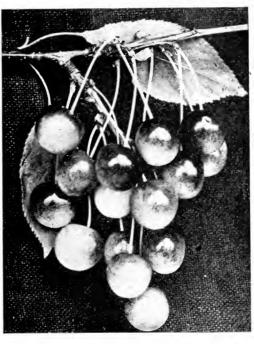

Late Duke. Fruit similar to May Duke, but later and not so sweet.

Dyehouse. A very early and sure bearer. Ripens a week before the Early Richmond. Richmond. Medium size, light red; melting, juicy, sprightly acid flavor. Tree healthy and productive. One of the most popular early cherries.

Montmorency. Large red cherry, ripening ten to fourteen days after Early Richmond. Tree a slow but stiff grower; very profitable bearer; valuable late sour cherry.

Morello. Good size, very dark red when fully ripe, rich, acid, juicy, excellent for canning. Later than Montmorency.

Plant a Cherry Tree in your back yard. Makes a fine shade tree.

Montmorency Cherries

Pears

The cultivation of this noble fruit is extending as its value is appreciated. The Pear, like most things highly desirable and valuable cannot be had without attention, labor and skill. One of the most important points in the management of the pear is to gather them in the proper time. Summer pears should be gathered at least ten days before they are ripe; and August pears at least a fortnight. Winter varieties, if they hang so long, may be left until there is danger of frost; gather when, on gently lifting the fruit, the stem will readily separate from the limbs. Place in a dark room until fully

until there is danger of frost; gather when, on gently litting the truit, the stem will readily separate from the limbs. Place in a dark room until fully matured.

The Pear succeeds on most soils, but probably does better on rather sandy loam.

Dwarf pears must always be planted deep enough to cover the junction of pear and quince three or four inches, and about one-half of the previous summer's growth cut off each spring. The side branches should not be removed higher than one foot from the ground in Dwarfs, while Standard Pears may be trimmed to the height desired.

The principal enemy to pear trees is the blight. This is a bacterial disease that at first appearance causes the terminals to wither and later die. Prune out below the injured part and burn all branches thus affected. Spraying will practically control this disease. Scalecide is considered the best for this purpose and should be applied in the spring during dormant period followed up with Sulfocide for summer spray. Luxuriant growth seems to be affected more quickly than slow maturing branches.

e quickly than slow maturing branches. At planting time prune to 3 to 5 well developed branches distributed evenly about the main stem. Shorten these to 6 to 8 inches. (The letters "D" and "S" appended to the descriptions of varieties indicate favorable growth, either as Dwarfs or Standards, or both.) varieties 20 to 25 feet apart; Dwarfs 10 to 12 feet apart.

AUTUMN VARIETIES Bartlett (S). One of the most popular pears; large, buttery and melting, with rich flavor. Tree a vigorous and erect grower; bears young and abundantly.

Clairgeau (S). Very large, yellow and red. Flesh yellowish. Keeps solid a long time after gathering. Free Bartlett (S).

Clairgeau (S). Very large, yellow and red. Flesh yellowish. Keeps solid a long time after gathering. Free grower and abundant bearer.

Angouleme (Duchess) (D). The largest of our good pears; succeeds on pear, but attains its highest perfection on quince, and is a beautiful and vigorous tree. Most profitable for market.

Anjou (S). A large, fine pear, buttery and melting, with sprightly vinous flavor. Tree a vigorous grower, and good bearer. Best on quince.

Garber (S). One of the Japan Hybrids; the best and handsomest of its class. Earlier than Kieffer, larger and much better quality; free from blight; very hardy. Immensely productive; bears young; excellent for canning or preserving.

or preserving.

Howell (S). One of the finest American pears. Large, handsome, sweet and melting; tree very vigorous, hardy

and productive.

Kieffer (S). This is a seedling raised from the Chinese Sand Pear crossed with the Bartlett. Skin rather rough. Netter (8). In its is a seeding raised from the Chinese sand Pear crossed with the Bartlett. Skin rather rough.

Color yellow, with red cheek in the sun. Flesh white, juicy, buttery and rich. Tree a very strong, upright grower.

Very profitable for market.

Seckel (8). The standard of excellence in pears. Small but of highest flavor. Tree a strong, slow, erect grower; very hardy and bears abundantly.

Sheldon (S). Fuit medium; color greenish-yellow, mostly covered with russet and a little brownish-crimson in the sun. Juicy, rich, aromatic and sweet.

WINTER VARIETIES Size medium to large; obovate; color a golden yellow; flesh melting, with a rich, aromatic flavor. Tree a moderate grower and an abundant bearer.

Wild Goose

Plum

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.

The plum demands a rich soil well drained and additional

The plum demands a rich soil well drained and additional fertility given after a few years proves beneficial. The trees usually are planted about 20 feet apart and can be used as a filler in an orchard between permanent trees. They thrive especially well in back yards, gardens and in chicken runs.

For home consumption the fruit should be allowed to ripen on the trees but for shipping they should be gathered a few days earlier. Some varieties always over-bear and thinning should be done to increase the size of the fruit. The two enemies are curculio and rot, both can be controlled by proper spraying and cultural methods. See Spray Calendar for control.

As the trees bear soon and are productive, more should be used

methods. See Spray Calendar for control.

As the trees bear soon and are productive, more should be used each year. The borer, similar to the one that attacks peaches, is also found. Scraping is the only practical way to eliminate.

Pruning at planting time should consist of removing one-half to two-thirds of the length of all the side branches, leaving 4 to 7 evenly distributed around the body of each tree.

Plant 20 feet apart; 109 to the acre.

Our plums are budded on imported plum roots.

Deck's Damson. Larger than the common blue and an earlier bearer. Freestone.

German Prune. Large, dark purple, sweet, good. One of the most popular and desirable for canning. September.

Lombard. Medium, violet red, juicy, good, hardy and productive; the leading market variety.

Shropshire. An English variety of great merit for preserving. An abundant bearer and hardy. Moore's Arctic. Small, purplish-black, juicy, sweet, immense bearer; one of the hardiest in bud and bloom. September.

JAPAN OR ORIENTAL VARIETIES

This class of plums and their hybrids are strong-growing trees with light green foliage and attractive bloom, productive and usually commence bearing the third to fourth year after planting. They bloom very early, should be planted on north or west slopes and in sections not subject to late spring fronts.

Large, nearly globular; clear cherry red, with a thin lilac bloom; flesh a deep yellow, very

sweet and agreeable flavor. Hardy; one of the best for both garden and market planting. August.

Wickson. A sturdy, upright grower, productive almost to a fault; fruit remarkably handsome, deep maroon; stone small; flesh fine texture, firm, sugary and delicious. Excellent keeper and fine shipper.

HANSEN HYBRIDS The varieties we are offering are all selected varieties that have proven profitable over a wide territory. Trees do not grow large, hence can be planted quite close together, 15 feet being sufficient. Trees should be grown more in bush form for best results. We recommend the planting of several varieties close together as the blossoms fertilize each other. Try a few of these new plums, you will be more than pleased with them.

Each 10 100 \$0.80 \$7.00 \$60.00 11/16 and up, 5 ft. and up......

Underwood. The Underwood is valuable because of its large, early fruit and annual bearing. It is the earliest of the large plums, attaining a size of 134 inches in diameter. The tree is a vigorous grower, the limbs being strong and well distributed and are able to carry pening strong and wen distributed and are and to can be to can great loads of fruit. Fruit, attractively red with fairly firm juicy flesh, small pit, clingstone, splendid quality, hangs well to the tree, ripening over a long period, August 1 to 15, enabling three pickings to be made. The Underwood is an annual bearer. These features appeal alike to the commercial grower and to the home

Waneta was originated by Professor Hansen at the Dakota Experiment Station. It is without question the best one of the numerous plums that have been sent out by him. The Waneta attains a size of two inches in diameter. Fruit, a dark purplish red overlaid with blue bloom; has a delicious flavor. This variety, like the others here described, is a regular annual bearer, from the control of the co often producing some fruit year after planting and getting into full bearing very quickly thereafter. The pit is very small for a fruit of its size. First blossoming period.

Lombard

Waneta

Monitor is one of the market plums we have been looking for. It has high quality, firm flesh and a large size—some being more than 1¾ inches in diameter, It is very productive and a regular bearer. The Monitor is an unusually vigorous grower and naturally produces a compact, well-shaped head without pruning. The limbs are strongly shouldered so that they will carry heavy loads of fruit. The following features of the Monitor show why it is one of the best for you to plant:

1. It is a regular annual bearer.

3. Firm flesh, excellent flavor.

 It is a regular annual bearer.
 Fruit large size, dark red.
 Limbs have strong forks so carry heavy loads of fruit without splitting. CHICKASAW VARIETIES Each

Wild Goose. Well known, large, deep red when ripe. Good quality; one of the best native plums; should be in every orchard. July.

Newman. Fruit medium, oblong; color bright vermilion. Adheres to the stone. Tree vigorous, foliage smaller than the Wild Goose. In fertility it is truly astonishing; its fruit ripens about August 15th. and lasts until September 15th. Best late Red Plum we know of.

AFFTON, MISSOURI

The demand for fresh berries is ever increasing; grow them and cash in at a time when you can use this extra money

Miscellaneous Fruits, Nuts and Berries

QUINCE

The Quince is hardy and prolific, bearing its crops with great regularity. The fruit always commands a good market, and with most families is considered indispensable for canning and jelly.

The trees or bushes should have a good, rich soil, clean cultivation and an annual dressing of well rotted manure. Thinning out the twigs so as to keep the head open to the sun and air, and removing dead or decaying branches, is all the pruning that is required. Plant 10 feet apart each way, 435 trees to the acre.

Champion. Originated in Connecticut. The tree is a prolific and constant bearer; fruit averaging larger than the Orange, but not so high colored; more oval in shape. Quality equally as fine, and a good keeper.

Orange. Fruit large, bright yellow color; a good bearer. The standard variety in quince

Each 5/8 and up, 4 ft. and up.....

APRICOT

There is no fruit more delicious or beautiful than the Apricot, and its ripening between cherries and peaches renders it especially valuable. Its chief enemy is the curculio, which can be kept in check by the method suggested for plums. Plant the same as plums.

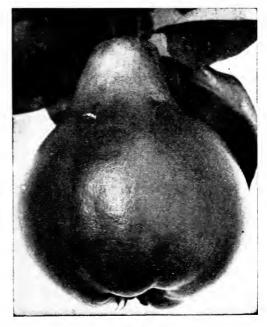

Early Golden. Small size; color pale orange yellow; juicy and sweet; exquisite

Royal. Large, yellow, juicy, rich and delicious; a very fine variety.

One of the largest; color orange yellow, with red cheek; firm, juicy, with a rich flavor; very productive. Fach

American Mulberries

Orange Quince

MULBERRIES-MORUS

American. Equal to Downing in fruit, but much hardier. Vigorous grower, very productive; the best variety for fruit; ripe from middle June to middle September. Russian. Very hardy, vigorous grower; valuable for feeding silk worms, also relished by birds.

Each \$0.75 \$6.00

NUT TREES

The growing demand for nuts and the immense quantities imported annually is giving an impetus to the planting of nut-bearing trees in America. Many farms contain land that would be far better planted to nut trees than in anything else, and would pay better than farm crops, besides annually growing more valuable as timber. In planting ordinary nut trees we would advise planting the smaller size stock—say one or two year seedlings—for best results.

Chestnut (Japan or Giant). A dwarf grower. Very distinct from other kinds, the leaf being long and narrow, of a dark green color. A fine ornamental tree in any situation. Commences bearing very young; two-year trees in nursery row frequently produce nuts. Nuts are of good size. The productiveness, early bearing and enormous discremental these of great value. size render these of great value.

Each 2 to 3 ft..... \$1.25 \$10.00

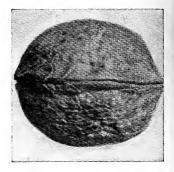

Chestnut (American Sweet). A valuable native tree, both useful and ornamental; timber very durable and possesses a fine grain for oil finish. Nuts sweet and of delicate flavor, and a valuable article of commerce. No farm should be without a grove of these where the soil is adapted to their

Each 4 to 5 ft..... \$1.50 \$12.50 Wainut (American Black). The large, oily nuts are borne in heavy crops. They are much relished and always bring a fair price in market. The tree grows quite fast; its wood is exceedingly valuable.

PERSIMMON (American)

The Persimmon makes a very handsome ornamental tree, and is hardy in this section. The fruit, although pungent when green, becomes sweet and palatable if allowed to remain on the tree exposed to the early frosts. 4 to 5 ft., each.....

HARDY GRAFTED ENGLISH WALNUT TREES
These are not the tender varieties grown in the South, but are the hardy
variety grown in New York State, Pennsylvania and Ohio.
Mayette. Probably the iargest, thin shell, smooth and attractive.
Franquette. Tree hardy and reliable, nuts medium large, shell fairly thin, cracks easily.

Each \$1.50 \$13.00

HARDY GRAFTED PECAN TREES
We have arranged for a supply of Grafted and Budded Pecan Trees for spring delivery.

These trees will bear in one-third the time that a seedling tree will fruit. You are saving time and getting results much sooner when planting budded nut trees. Planting instructions will accompany each tree. Plant 40 to 50 feet apart as they make very large trees.

Frotscher. Medium size, rather long and tapering, rich meat, tree strong grower and extremely hardy. Schley. Thrifty, strong grower. Nut of the very highest quality and very thin shell.

Stuart. Extremely hardy, strong grower, nuts of good size, plump, well filled stop.

Each

Grafted or Budded Trees, 3 to 4 feet...... \$1.75 \$15.00

BLACKBERRIES

Many kinds of blackberries will succeed, not only on good fruit land, but even on the most sandy, porous soil. They require the same treatment as recommended for raspberries, but in field culture should be planted in rows seven feet apart and three feet distant in the rows; in garden culture, plant rows five feet apart and three feet distant in the rows. The pruning should be governed by the growth of cane and should be severe. Pinch back the canes in summer when three feet high, causing them to throw out laterals.

Heavy mulch of straw or other light litter is very beneficial.

When planting 7 by 3 feet it takes 2,078 plants for an acre.

When planting 5 by 3 feet it takes 2,004 plants for an acre.

Our blackberry plants are all grown from root cuttings: they are free from disease.

If wanted by parcel post, add 5c to the 10 price, 10c to the 25 price, 30c to the 100 price, to cover postage and extra packing.

For 1st, 2nd and 3rd zones. Larger lots should be sent by express.

lowers. Originated in Chautauqua County, New York. Claimed to be the hardiest, most productive and the finest quality of all the blackberries. Large size, jet black, good shipper. We believe this variety has special merit. Blowers. Per 10, \$1.10; per 25, \$2.00; per 100, \$6.00; per 1,000, \$50.00.

Early Harvest. This is one of the earliest blackberries in cultivation; a compact, dwarf grower; fruit medium size and fine quality; an enormous bearer.

Per 10, 75c; per 25, \$1.50; per 100, \$4.75; per 1,000, \$36.00.

Eldorado. Very vigorous and hardy, enduring the winters of the far Northwest without injury, and their yield is enormous. The berries are large, jet black, melting and pleasing to the taste; have no hard

Per 10, \$1.00; per 25, \$1.85; per 100, \$5.50; per 1,000, \$45.00.

Lucretia. One of the low-growing, trailing blackberries; in size and quality equals any of the tall-growing sorts. Perfectly hardy, healthy and remarkably productive, with large showy flowers. The fruit, which ripens early, is often one and one-half inches long by one inch in diameter; soft, sweet and luscious throughout, with no hard core; ripe before late raspberries are gone. Should be mulched to keep berries from the ground.

If wanted by parcel post add 5c to the 10 price, 10c to the 25 price, 30c to the 100 price. For 1st, 2nd and 3rd zones. Each, 10 cents; per 25, \$1.75; per 100, \$4.50; per 1,000, \$36.00.

Early Harvest

Lucretia Dewberries

Eldorado Blackberries

Cuthbert.

uthbert. A remarkably strong, hardy variety; berries very large, rich crimson, very handsome, sweet, rich and luscious; highly flavored.
Each, 10 cents; per 25, \$1.50; per 100, \$5.00; per 1,000, \$25.00.

King. Said by many to be the best early red raspberry. Plant a strong grower, hardy and productive. Berry firm, good shipper; large size; color, bright scarlet. Each, 10 cents; per 25, \$1.50; per 100, \$5.00; per 1,000, \$25.09.

Latham. The Big Red Raspberry. The production of this new variety, together with the fine appearance of the fruit and its splendid shipping qualities make it a very profitable sort. Its extreme hardiness and splendid vigor insure big crops. We consider this a valuable addition to our list of Red Raspberries.

Each, 13c; per 25, \$2.10; per 100, \$6.50; per 1,000, \$52.00.

St Regis. This variety has proven its worth again during the season of 1927, producing fine crops of fruit. Begins to ripen with the earliest and continues to bear on young wood until October. Berries bright crimson, laye size, rich sugary raspberry flavor. Flesh firm and meaty, a good shipper. Wonderfully productive, the first or main crop, equalling any red variety known. Canes stocky, of strong growth, with abundant dark green leathery foliage. Thy it. Each, 10 cents; per 25, \$1.50; per 100. \$5.00; per 1,000, \$25.00.

PURPLE SORTS

olumbian. An improvement on Shaffer's, which it resembles, but the berry is much firmer, adheres to the bush much longer and retains its shape better, both on the market and for canning. Bush a stronger grower, attaining a very large size. One of the hardlest and wonderfully prolific. Unexcelled for productiveness, and stands at the head for canning, making jam, etc. Each, 10 cents; per 25, \$1.50; per 100, \$5.00; per 1,000, \$25.00.

BLACK SORTS

Cumberland. The largest of all black caps. A healthy, vigorous grower, throwing up stout, stocky, well-branched canes that produce immense crops of magnificent berries. Fruit very large, firm; quality about the same as Gregg; keeps and ships well as any of the blacks. The most profitable market variety. Each 25 100 I.000

\$0.10 \$1.50 \$5.00 \$25.00

A strong, vigorous grower, standing extremes of drought and cold and bearing immense crops. Early, berries size of Gregg, of better color; jet black and almost free from bloom; firm, of best quality; presents a handsome appearance and brings highest price in market.

Each \$0.10 \$1.50 \$5.00 \$25.00 Plum Farmer. A few days later than Kansas; matures its crop in a very short period, making it one of the most profitable early market sorts. Berries are thick-meated, firm, with a bloom similar to Gregg. Large

Each 100 I,000

King Raspberries

Can not be shipped to states west of Iowa, Missouri and Arkansas, or to

Can not be shipped to states west of lowa, Missouri and Arkansas, or to Minnesota, account embargo.

Requires same cultivation as the currant. Mulch deeply six or more inches with straw. The mulch retains moisture and the fruit is large and evenly ripened. In mulching, be sure that the ground is underdrained, or it is worse than useless. Good cultivating is better than half mulching. The American varieties are not subject to mildew. To prevent mildew, spray the bushes as soon as the leaves appear in the spring, and several times during the summer with potassium sulphide (liver of sulphur),

spring, and several times during the summer with potassium sulphide (liver of sulphur), one ounce to four gallons of water.

Plant in rows five feet apart and the plants three feet apart in the rows—2,904 plants to the acre. Write for prices on larger quantities than quoted.

If wanted by parcel post add 3c per plant to the price quoted to cover postage and extra packing. For 1st, 2nd and 3rd zone.

Downing.—Size medium to large, oval, greenish white; plants vigorous, upright, very productive; never mildews.

CURRANTS, GOOSEBERRIES, BLACKBERRIES and RASPBERRIES

Apply Scalecide (I-15) just as or before new growth starts, to kill scale. Spray the clumps and ground around them to control fungous troubles and insects wintering there. To control mildew and rust, apply Sulfocide as often

Conover's Colossal Asparagus

ASPARAGUS

Asparagus is the earliest and best of all esculents and easy to grow. There are two ways to grow Asparagus. The owner of a town lot needs a bed of five feet wide and as long as he wishes. Let it be made rich and spaded over, three rows eighteen inches apart, setting plants about sixteen inches apart in the row, and say, four inches deep. Spread roots out well so the plant will not be cramped, then let the earth be raked over, covering plant about two inches; as the plant grows up, more ground should be added and let this bed be kept clean and free from weeds at all times and well manured. Asparagus plants grow upward in place of downward; hence the filling in at intervals.

The gardener, with a plow and ample ground, can do better. Let him lay off rows five or six feet wide, and plant and manage just as indicated. After two years' growth, the town man must fork over his bed, but the farmer can just cut the earth from the rows and turn it back. The old idea was to set the roots a foot deep, so that the shoots might be long and white. The new idea is to let the plant grow like any other and then mound over the crown when the shoots are wanted otherwise than nature intended, and at the end of that time to when the shoots are wanted otherwise than nature intended, and at the end of that time to plow the soil and restore normal conditions. This can be done by the large grower, but the town man can only heap more manure and force the plant to make a new tier of roots nearer the surface. Asparagus wants to be near the surface like any other plants, therefore heap the earth over them for a time and then remove it when shoots long, white and tender are no longer needed. The things that cause failure are planting near trees or vines, the covering of plants so deep that resurrection is impossible, the mowing of tops when green, or letting weeds overtake the bed. The plants may be set with equal certainty either fall or spring.

100 2-year, No. 1.....

Columbian Mammoth White. It produces shoots which are white and remain so as long as fit for use. In addition to the marvelous advantage of its white color, the Columbian Mammoth White Asparagus is even more robust and vigorous in habit, and throws larger shoots and fully as many of them as the Conover's Colossal.

Conover. A mammoth variety of vigorous growth; an old and well-tried sort; very popular. Palmetto. Of Southern origin. It is earlier, a better yielder, more even and regular in its growth, and in quality equal to that old favorite. Conover's Colossal.
 Washington (New). A new rust-resistant pedigreed Asparagus.

..... \$1.00 \$2.00 \$15.00

If wanted by parcel post, add 10c for 25 plants; 30c for 100 plants; larger lots should be sent by Express or Freight.

RHUBARB OR PIE PLANT

This deserves to be ranked among the best early fruits of the garden. It affords the earliest material for pies and tarts, continues long in use and is valuable for canning. Make the bed very rich and deep. Plant in rows four feet apart and the plants three feet distant. Set the roots so that the crowns are about an inch below the surface. Linnaeus. Large, early, tender and fine; the very best of all.

Victoris. Large stems, not quite as red as Linnaeus. A heavy cropper.

Grapes

SEE PAGE 9 FOR SPECIAL COLLECTION OFFERS.

There is scarcely a yard so small, either in country or city, that room for one to a dozen or more grape vines cannot be found. They do admirably trained up to the side of any building, or along the garden fence, occupying but little room and furnishing an abundance of the healthiest fruit. Make the soil mellow and plant the vines somewhat deeper than they stood in the nursery. Plant about eight feet apart, along the fence or building. For vineyard

trained up to the side of any building, or along the garden tence, occupying but little room and turnishing an abundance of the healthiest truit. Make the soil mellow and plant the vines somewhat deeper than they stood in the nursery. Plant about eight feet apart, along the fence or building. For vineyard purposes make rows eight feet apart, six feet in rows. For Arbor, plant four feet apart.

Grape Vines require a dry, mellow, well-drained soil, deeply worked and well enriched, with a warm, sunny exposure. In planting, give the roots plenty of room and settle soil firmly about them. All newly planted vines should be cut back to 2 to 3 buds or eyes as soon as planted. Two sprouts or canes should be allowed to grow the following summer and should be carefully tied to stakes to keep them from becoming broken in cultivation, winds, etc. The following winter these canes should be cut back to five feet and tied to the lower wire of the trellis, which should be put up the following fall or winter of the subsequent opinion of wines as well as trees, planters would do well to consult some practical work on the subject. after planting. For the subsequent pruning of vines as well as trees, planters would do well to consult some practical work on the subject.

SPRAYING GRAPES

Soak the vines with Scalecide (I/I5) just before the growth starts. We believe that this dormant spray with Scalecide is of greater value than anything else you can do in the way of spraying. This cleans up the eggs and larvae of insects, helps to control fungous troubles such as blackrot cankers and mildew and tends to make your vines more vigorous and productive.

When the blossom buds are forming, or when shoots are 4 to 6 inches long, use 3 pounds soap and one gallon Sulfocide to 200 gallons water. Repeat this spray after fruit sets. Any good soft soap will do, such as fish oil soap. Bordeaux mixture can also be used for this spray with good

Do not use later sprays until fruit is ripe—as, occasionally, severe injury results—but we know of no spray, outside of Sulfocide that will stop black rot after it sets in. Direct spray at fruit rather than the foliage as Sulfocide does not show on the fruit. If the dormant spray with Scalecide or the two early Sulfocide sprays are omitted it is unreasonable to expect healthy vines in mid-season, but if the early sprays are properly done, mid-season sprays are unnecessary. If you spray in mid-season use Bordeaux. Ripe grapes that have been sprayed with Sulfocide and left on the vines will often shrivel rather than rot.

To plant an acre, 6 by 8 feet, requires 908 plants. Write us for prices on larger quantities.

If wanted by parcel post add 1c per plant to the prices quoted up to 100 lots to cover postage and extra packing. Larger lots should be sent by Express or Freight. **Campbell Early.** A fine healthy and early variety, profuse bearer. Ripens with the Moore's Early but keeps on the vine or in the house for weeks.

Strawberries

As we have not grown Strawberry plants for the past few years and have accommodated our patrons by securing them from reliable growers, we wish to announce that we have discontinued handling these plants on account of the heavy loss sustained each year, owing to delays in delivering after being shipped. We would advise our patrons to buy direct from the growers. Get plants while they are in good condition.

SPRAYING—SIMPLE AND EASY

With the Most Effective Summer and Dormant Sprays

Any fruit grower who understands the value of Scalecide will select it as his regular dormant spray. Scalecide is truly "the complete dormant spray." When you spray with Scalecide, you can rest assured that you have done all that can be done, at that particular time, by any dormant spray or combination of sprays. Scalecide is the quality miscible oil. It is a profit maker and not merely a bug killer. The invigorating effect alone is worth the cost. Many of the finest orchards are sprayed every year with Scalecide. Dilute one gallon to fifteen gallons of water. Is 100 per cent effective for killing Scale and Aphis. Kills eggs of Leaf Roller and Red Mite.

Kills fire blight cankers, fungous cankers and fungous spores. Invigorates your trees, saves labor and is a guaranteed product.

Kills fire blight cankers, fungous cankers and fungous spores.

Invigorates your trees, saves labor and is a guaranteed product.

One gallon of SCALECIDE makes fifteen gallons spray.

Pleasant to Use. When you spray with Scalecide, you do away with slickers and gauntlets and goggles. You will enjoy spraying with Scalecide—it is so pleasant to use. You can look straight at your wotk, without fear of injuring your eyes. Fruit growers say, "The job I used to dread so much before, I now actually look forward to. I like to spray with Scalecide."

Guaranteed to Make a Better Orchard Than Lime-Sulphur. The manufacturer's guarantee that, if an orchard is divided in two parts, one part being sprayed with Scalecide, and the other part with limesulphur for three years, other things being equal, the part sprayed with Scalecide will be better than the part sprayed with lime-sulphur, or they will refund the money you have paid for the Scalecide. Ask for copy of the gyrantee of the guarantee.

We are the Western Distributing Agents for the B. G. Pratt Co., Manufacturers

Briefly, these are the reasons why Sulfocide is "a better summer spray". It does not russet apples (Bordeaux does); it does not devitalize the foliage and dwarf the fruit (lime-sulphur does); it can be used on both peaches and apples and on all kinds of fruits and vegetables (no other fungicide can); it imparts to the fruit a beautiful lustre and finish; it costs no more than home-made Bordeaux. Sulfocide is a highly concentrated, nonpoisonous, liquid sulphur fungicide, quite distinct from lime-sulphur.

The most powerful fungicide. Will control apple scab, stops brown rot, retards decay in ripening fruit. The best remedy on the market for controlling the shot-hole fungous which defoliates the cherry tree in early summer. One gallon makes 200 gallons spray.

Combines With Kayso and Arsenate of Lead. We can now recommend the new combination of Kayso (mix it in the water first), and arsenate of lead (mix it in the water second), with Sulfocide (mix it in the water last). Always mix in the order named. Add the sulfielde after all the water has been put in the spray tank. Use only plain arsenate of lead—in the case of an arsenate of lead containing a so-called self spreader, there is apt to be burning. This combination has been thoroughly tested for a number of years with good success.

Paradichlorobenzine, Now Called Parazene

DIRECTIONS FOR KILLING THE PEACH TREE BORER

Application should be made in the early spring or early fall, on trees 5 years old or over.

The earth for 15 or 18 inches around the base of trees should be cleared of grass and weeds and leveled off, without, however, digging up the soil more than necessary to break the surface crust. After the soil around the base of the tree has been prepared, then one ounce of PARAZENE is applied evenly in a circular band an inch or two wide, entirely around the tree. This band or trench should be about three inches away from the tree trunk. After the application the chemical should be quickly covered with soil, and a mound should be made sloping up toward the tree, and the soil should be patted down with a shovel or some other convenient tool, so that no vapor will escape.

PRICES: 1-lb. cartons 69c each; 5-lb. drums 45c per lb.; larger quantities priced upon application.

Grasselli Plant Food

DIRECTIONS FOR USING GRASSELLI PLANT FOOD

For Trees, Shrubs, Vines, Roses, etc. When it can be done without injury to the lawn, the ground around trees, shrubs or vines should be worked occasionally, particularly in the spring, and the fertilizer distributed over the finely divided soil, as evenly as possible, at the rate of I ounce per square foot, and thoroughly watered in.

In case the ground under the trees or shrubs is in sod-applications should be made as directed for old lawns.

Gardens. To obtain best results in flower or vegetable gardens, it is necessary to give careful attention to the preparation of the soil, and care should be taken to see that the top soil is made as fine as possible. Grasselli Plant Food should be mixed with the fine top soil, before planting, at the rate of one ounce per square foot, and should be distributed as evenly as possible, and well raked in.

Lawns. For best results on old lawns, Grasselli Plant Food should be applied early in the spring, before the growth starts, at the rate of one-half ounces ter square foot, and again in the fall after growth has stopped, at the same rate. For new lawns Grasselli Plant Food should be used as directed

Insecticides and Fungicides

KAYSO Revised Directions

Revised Directions

Spraying authorities and commercial fruit growers in the Atlantic Coast and Middle Western states have concluded after two years' practical use and experimentation, that for best results KAYSO should be used at the rate of 1 pound to 100 gallons of dilute spray (2 pounds to 200-gallon tank). This amount not only gives better spreading but, by increasing adhesiveness, it makes the sprays more resistant to weathering by rain, wind and dews.
